BioCoRE Notebook

Page title:

Page owner: Joe Scientist

Creation date: 9/3/01

Last modified: 9/3/01

Notarization date: 9/3/01

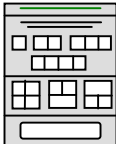

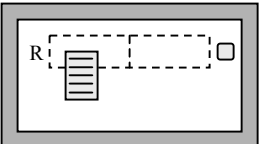

Publication status: Public Private ?

The BioCoRE Notebook Editor

What it does: The Notebook editor helps users create notebook pages that will appear as .html pages viewable by a web browser.

How to create a page: Click the 'New Page' button below, and then click 'Click here to ADD a ROW' to start adding content.

How page content is organized: Rows of boxes are used to add content to a page. For example, if you wanted to put an image on a page and add some text about the image, you could select a row with two boxes, one box for the image and the other for the text (see below). To add more content, add another row.

1. Decide what content you want to add to the page, e.g. text and an image, and then click the 'ADD a ROW' button.	2. Select the row layout you want, e.g. a row with two boxes for an image and some text, from the menu that appears and add it to the page.	3. Right-click within a box in a row to get a list of Editors that let you add content to a box. For example, the text and image editors to add text and an image
<input type="button" value="Click here to ADD a ROW"/>

Text Editor Prototype for BioCoRE Notebook

Drop-down menu of Greek/math characters.

Menu allowing insertion of URLs or BioFS file refs (will open in new window).

Text color menu.

How it works

- A basic text to HTML editor, so that your text can be read as a web page
- Text formatting limited to what you can do in basic HTML; will include math symbols for use in equations, etc.
- Can insert URLs and references to BioFS files – they will open in a new browser window
- Can add a centered title to the text passage if desired

Equation Editor Prototype for BioCoRE Notebook

How it works

- Produces and image of an equation
- Enter LaTeX commands in lower window, update to change image in upper window, publish to page when done
- LaTeX reference guide included
- Can add title and caption to equation image

BioCoRE Notebook Equation Editor

Equation Image (as produced by LaTeX) ?

$$\left(\frac{2 - 2}{2 + 2} \right)$$

LaTeX Window (use to create equation) Reference

`\left(\frac{2-2}{2+2} \right)`

Title:

Caption:

Clear LaTeX

Update Equation

Publish

This tool is based on the EMSL Collaboratory, Electronic Laboratory Notebook v. 5.0 Equation Editor:
<http://collaboratory.emsl.pnl.gov>

Their editor they attribute in part to the HotEqn IMGless Equation Viewer Applet: “HotEqn is a Java applet to view and display mathematical equations on the Web. The applet uses familiar LaTeX notation to code its equations.”
<http://www.esr.ruhr-uni-bochum.de/VCLab/software/HotEqn/HotEqn.html>

The HotEqn project is part of the Virtual Control Lab 3.1 project:
<http://www.esr.ruhr-uni-bochum.de/VCLab/index.html>

We hope to incorporate these ideas into BioCoRE, with the consent of the above.

BioCoRE Notebook Table Editor

How it works

- Produces a table with text or numbers only
- Users selects row and column options, producing second screen where text or numbers are entered, then publishes table to main page
- Can add title and caption to table if desired

BioCoRE Notebook Table Editor

Note: Tables can hold text/numbers only.

Rows:

- Enter number of rows:
- Row borders: ▾

Columns:

- Enter number of columns:
- Column borders: ▾

Cell padding: ▾

BioCoRE Notebook Table Editor

Enter text or numbers only in table cells below.

BioCoRE Notebook Whiteboard/Image Editor

How it works

- A basic whiteboard, that produces an image to be inserted on the main page
- Includes a set of math symbols for use in equations, etc.
- Allows input from electronic pens
- Can add title and caption to image

BioCoRE Notebook

Configuration page for Notebook Editors & Image Size

Settings for: Joe Scientist
Last updated: 9/3/01

Notebook Editors:

- Choose to use default or external editors by clicking checkboxes below
- To use an external program as an editor:
 - Enter the pathname and command line in the area indicated below
 - If the editor is not command line executable, you will have to save files from the editor into the BioFS and then insert them into the Notebook.
 - Save your configuration changes when done

Enter pathname and command line for editor below ([help](#))

Text/File refs/URLs	<input checked="" type="checkbox"/> Default editor	<input type="checkbox"/> Ext. editor	<input type="text"/>
Whiteboard/Images	<input checked="" type="checkbox"/> Default editor	<input type="checkbox"/> Ext. editor	<input type="text"/>
Tables	<input checked="" type="checkbox"/> Default editor	<input type="checkbox"/> Ext. editor	<input type="text"/>
Video/Audio	No default editor	<input type="checkbox"/> Ext. editor	<input type="text"/>
Equations	Enter LaTeX text into default editor, then submit to Notebook page.		

Image Size for Whiteboard Editor:

- Choose image size for default image editor from default values, or enter height and width
- Note: You will have to restart any image presently in the editor if you change the canvas size

Default settings:

Height (in.):

Width (in.):

This page allows users to select an external editor (i.e. your preferred program) to use, or change the size of whiteboard images.

BioCoRE Notebook	Page title: Summary of prototype progress since 8/15/01		Publication status: ●Private	
	Page owner: Joe Scientist	Creation date: 9/3/01	Last modified: 9/3/01	Notarization date: 9/3/01

Prototype Development

The purpose of prototype development in the software creation process is to increase efficiency by showing end-users mock-ups of interfaces so that they can comment on issues such as needed functionality, understandability, etc. of the intended software product. To the right is a thumbnail of a blank BioCoRE page used as a template for prototyping new components. [Click here to open a PowerPoint file of the template from the BioFS.](#)

BioCoRE Prototype Template

Notebook Prototype

A present target of prototyping is an electronic notebook for BioCoRE. The goal of an electronic notebook is to provide functionality similar to a paper notebook, plus some electronic advantages. [An example is the EMSL Notebook \(will open in a new browser window\).](#)

This is a sample
Notebook page.

Sample Equation in the Notebook

$$\left(\begin{array}{c} 2 + 2 \\ \hline 2 - 2 \end{array} \right)$$

Created using LaTeX editor

The BioCoRE Notebook is laid out using tables with different types of data put in different cells. You can make references to BioFS files and external URLs, insert equations and figures, etc., as a means of presenting your ideas to you collaborators.

This part floats beside the page, like the Control Panel.
