Official BioCoRE FAQ

Other questions:

1. **When I try to use the VMD applet or NAMD Configuration File Generator, I get an error saying the Java Plug-In could not be detected.**
   First, take a look at http://www.ks.uiuc.edu/Research/biocore/swing_setup.shtml for help and instructions on getting Swing installed with Netscape. If that doesn't help, then sometimes, when there is more than one version of Java installed, Netscape does not use the version you want it to. Start up the Java Plug-In Control Panel with the command "ControlPanel". (Or run the "ControlPanel" script from the "bin" directory of the Java installation that your browser is using.) In the "Advanced" tab of the Control Panel, select the Java installation that you want to use from the dropdown box in the "Java Runtime Environment" box. Then try restarting your browser.
   - For Linux, please take a look at this page for getting the Java Plug-In installed in Linux.
