

QwikMD: Easy preparation of Molecular Dynamics Simulations

Rafael C. Bernardi

Department of Physics at Auburn University
NIH Center for Macromolecular Modeling and Bioinformatics

 rcbernardi@auburn.edu
 @rafaelcbernardi

COLLEGE OF SCIENCES
AND MATHEMATICS

Employing QwikMD, a user is able to prepare an MD simulation in just a few minutes, allowing studies of point mutations, partial deletions and even atomic force microscopy experiments.

QwikMD assists a new user in performing molecular dynamics (MD) simulations, while it also servers as a learning tool. Many "info buttons" provide the theoretical background underlying the MD procedures carried out in modern MD simulations.

JV Ribeiro*, RC Bernardi*, et al.; **QwikMD Integrative Molecular Dynamics Toolkit for Novices and Experts**. Scientific Reports, 2016

What is Molecular Dynamics?

*“Certainly no subject or field is making more progress on so many fronts at the present moment than biology, and if we were to name the most powerful assumption of all, which leads one on and on in an attempt to understand life, it is that **all things are made of atoms, and that everything that living things do can be understood in terms of the jigglings and wigglings of atoms.**”*

Richard Feynman

QwikMD: step-by-step

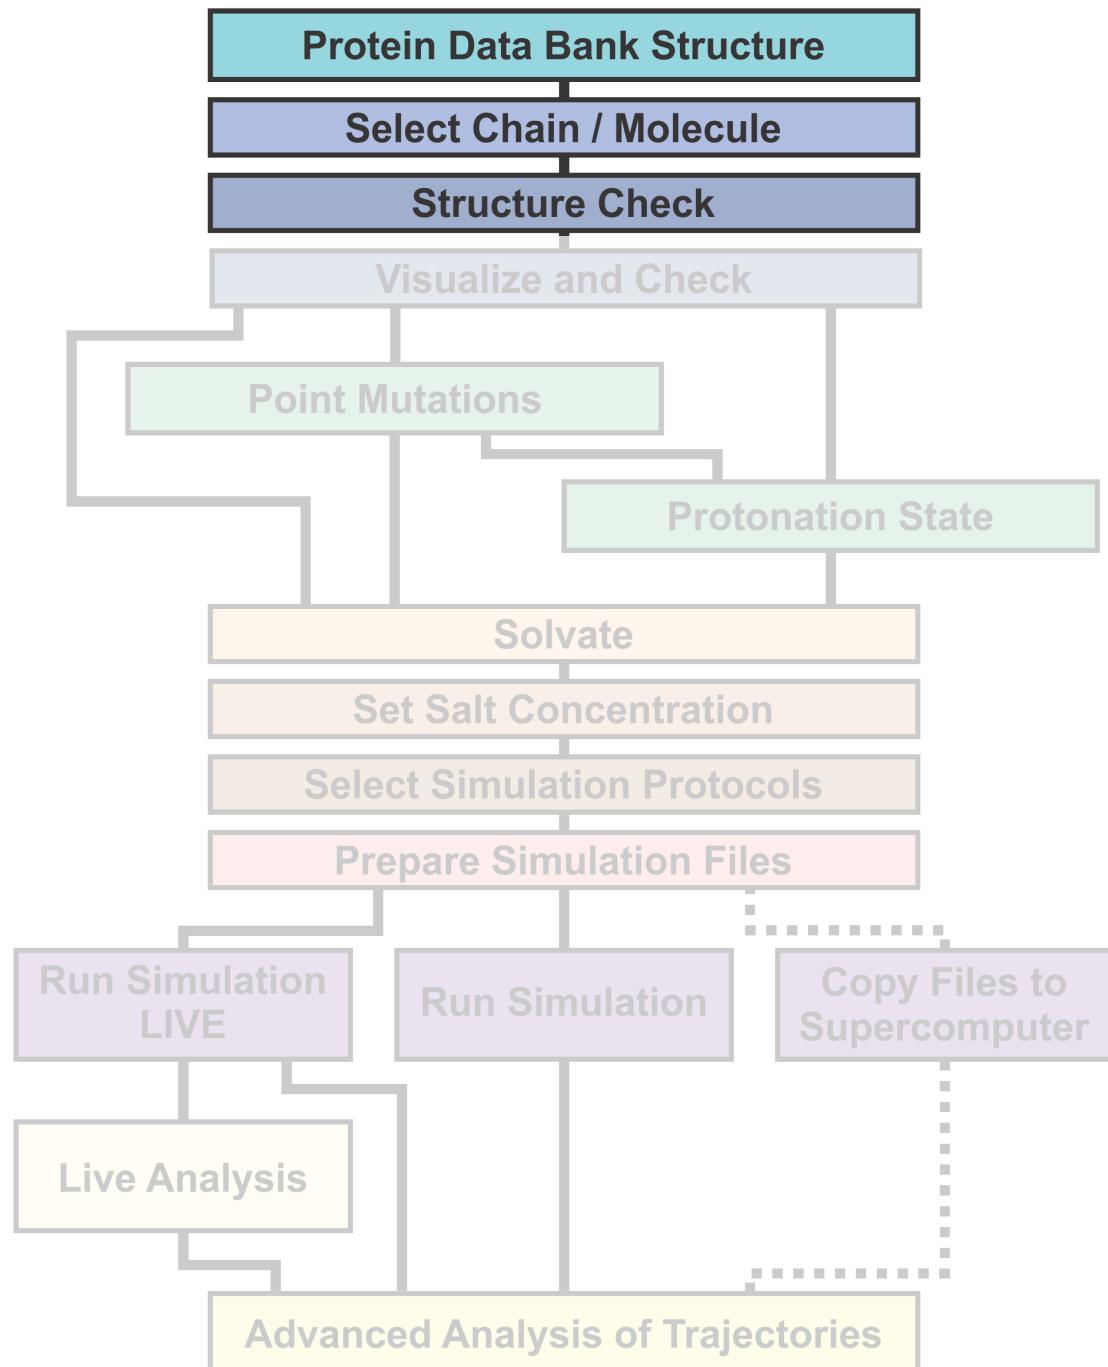

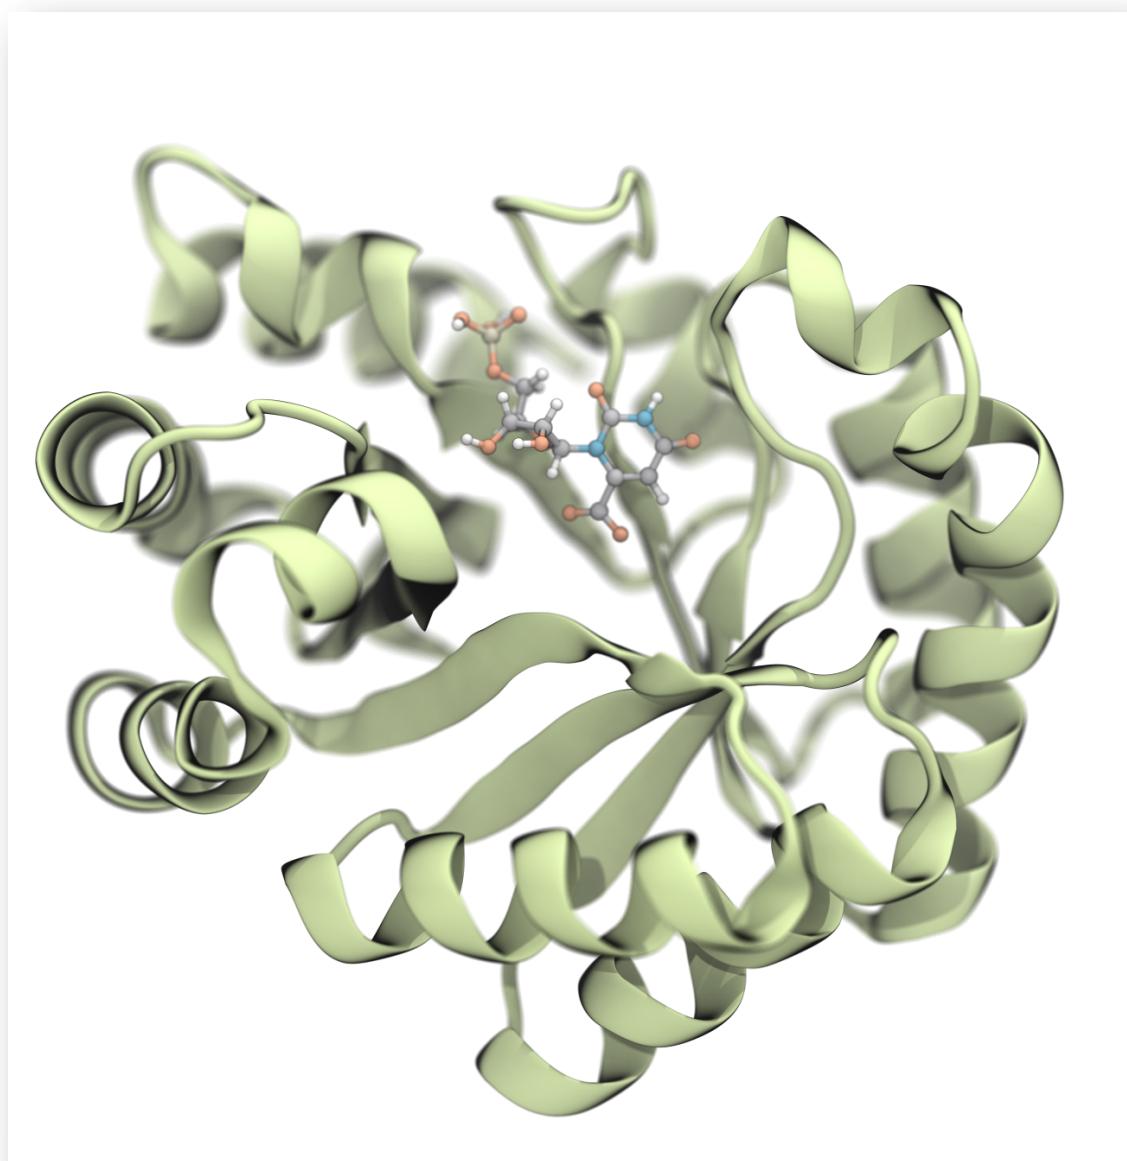

The screenshot shows the RCSB PDB homepage. The top navigation bar includes links for Deposit, Search, Visualize, Analyze, Download, Learn, and More. A search bar at the top right contains the text "Enter search term(s)" and a magnifying glass icon. Below the search bar is a banner for "October Molecule of the Month" featuring a 3D model of the Capsaicin Receptor TRPV1. To the left, a sidebar menu lists Welcome, Deposit, Search, Visualize, Analyze, Download, and Learn. The main content area includes sections for "A Structural View of Biology" (with a COVID-19 coronavirus resources link), "Latest Entries" (showing a 3D model of ICOS in complex with ICOS-L and an anti ICOS-L VNAR domain), "Features & Highlights" (listing services like tabular reports, APIs, and validation reports), "News" (with a Fall Newsletter Published update), and "Publications" (with a 2020 Nobel Prize in Chemistry update). At the bottom, there are links for "PDB at a Glance", "169963 Structures", "49498 Structures of Human Sequences", "12393 Nucleic Acid Containing Structures", and "More Statistics".

QwikMD user can easily perform point mutations. To do so, select "Mutate" and click on the amino acid from the sequence amino acid table. A list of all possible mutations will allow the user to select the desired mutation.

The list of amino acid in the protein sequence is colored according to the secondary structure.

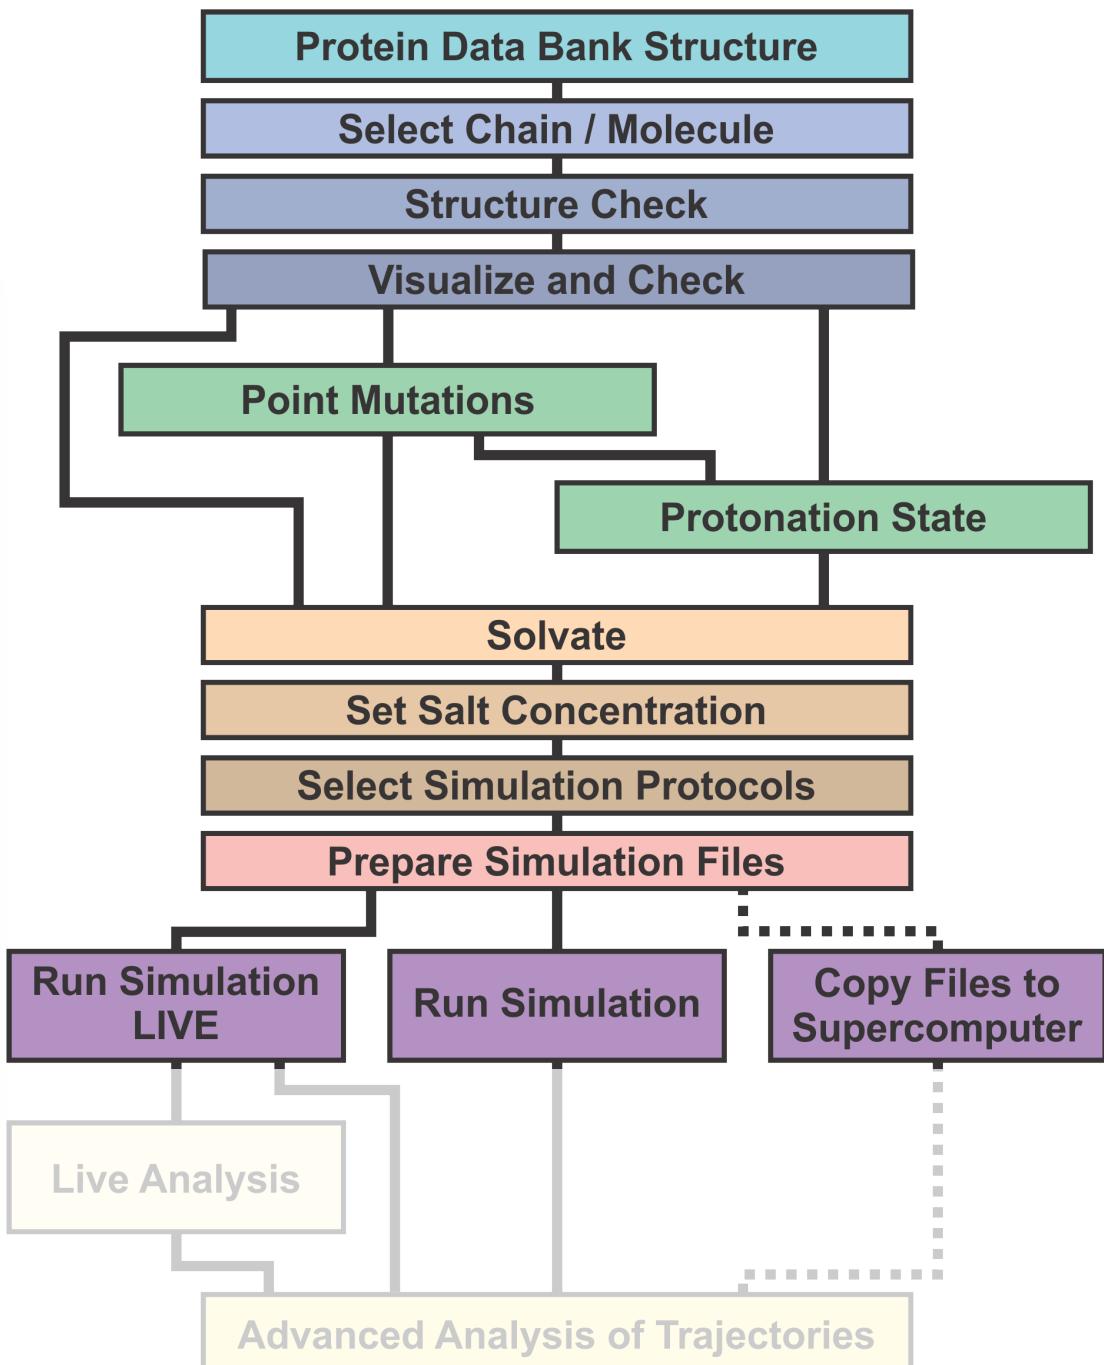

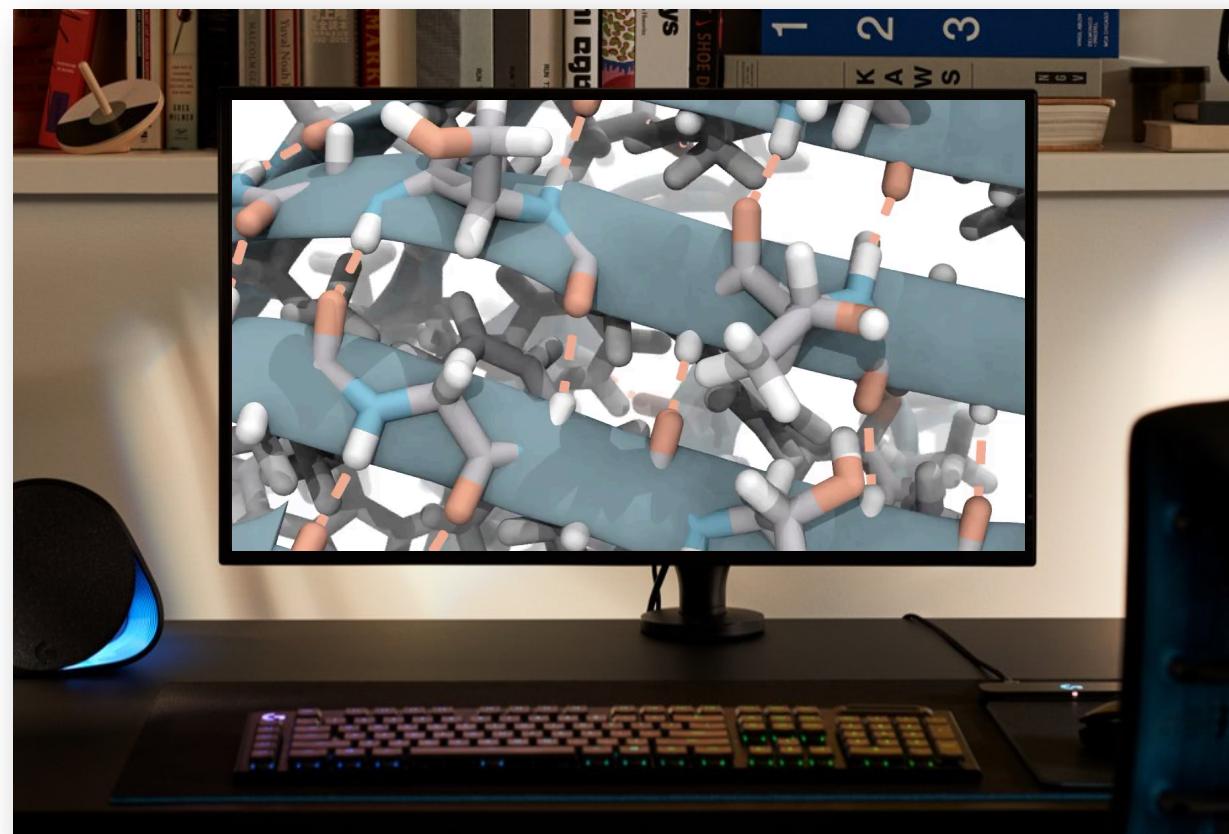

An automated check of the structure is performed when a PDB is loaded by QwikMD. If problems arise they will be marked in the "Structure Check" Tab. The user will be guided on how to fix the problems found.

All molecules of the system are presented in a list and can be separated by type or chain. The QwikMD user can easily delete parts of structure, change protonation states, perform point mutations, among other actions.

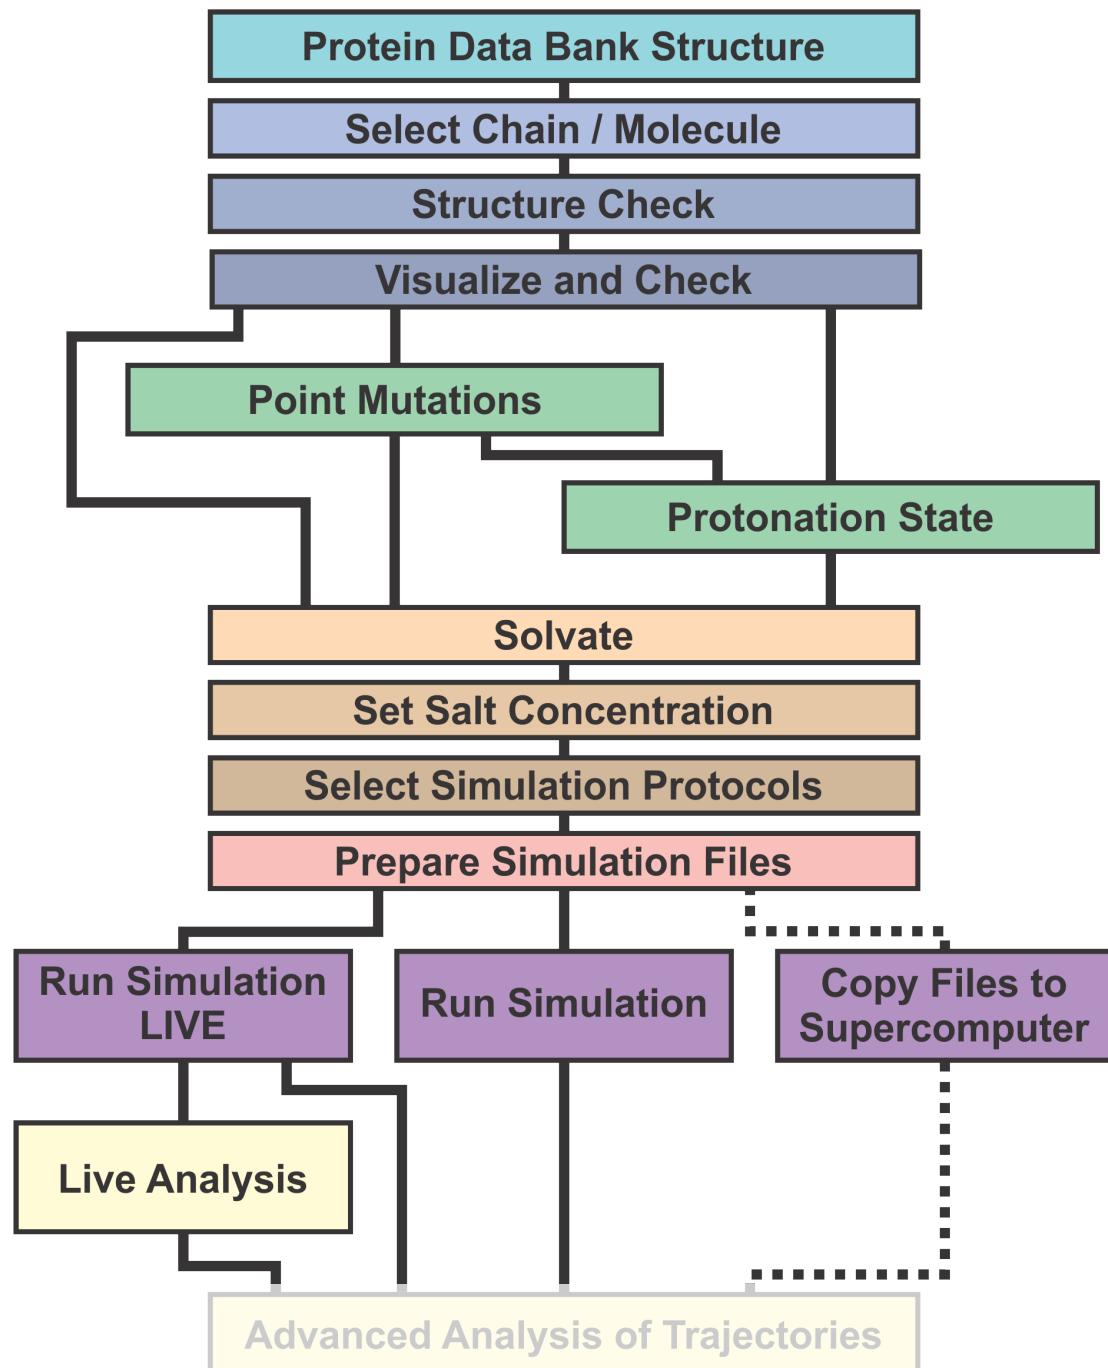

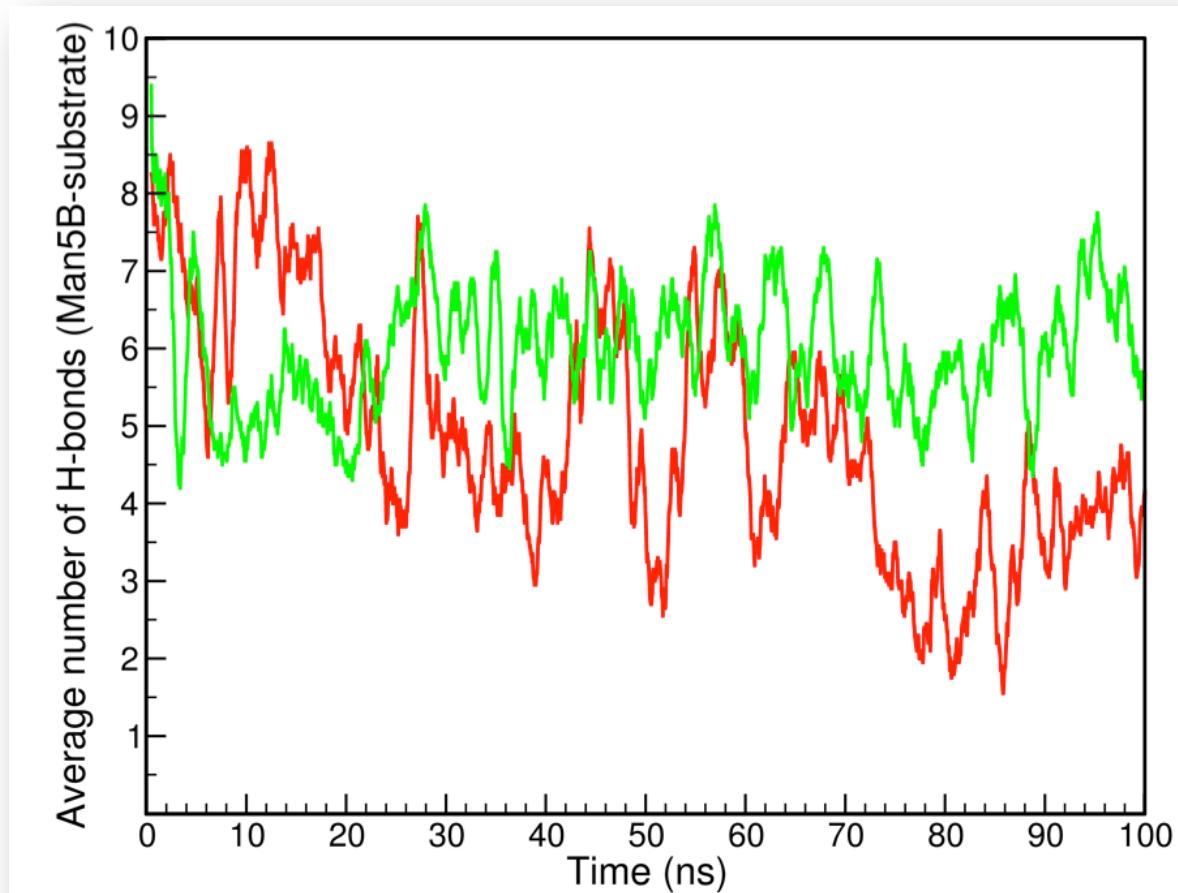

QwikMD: step-by-step

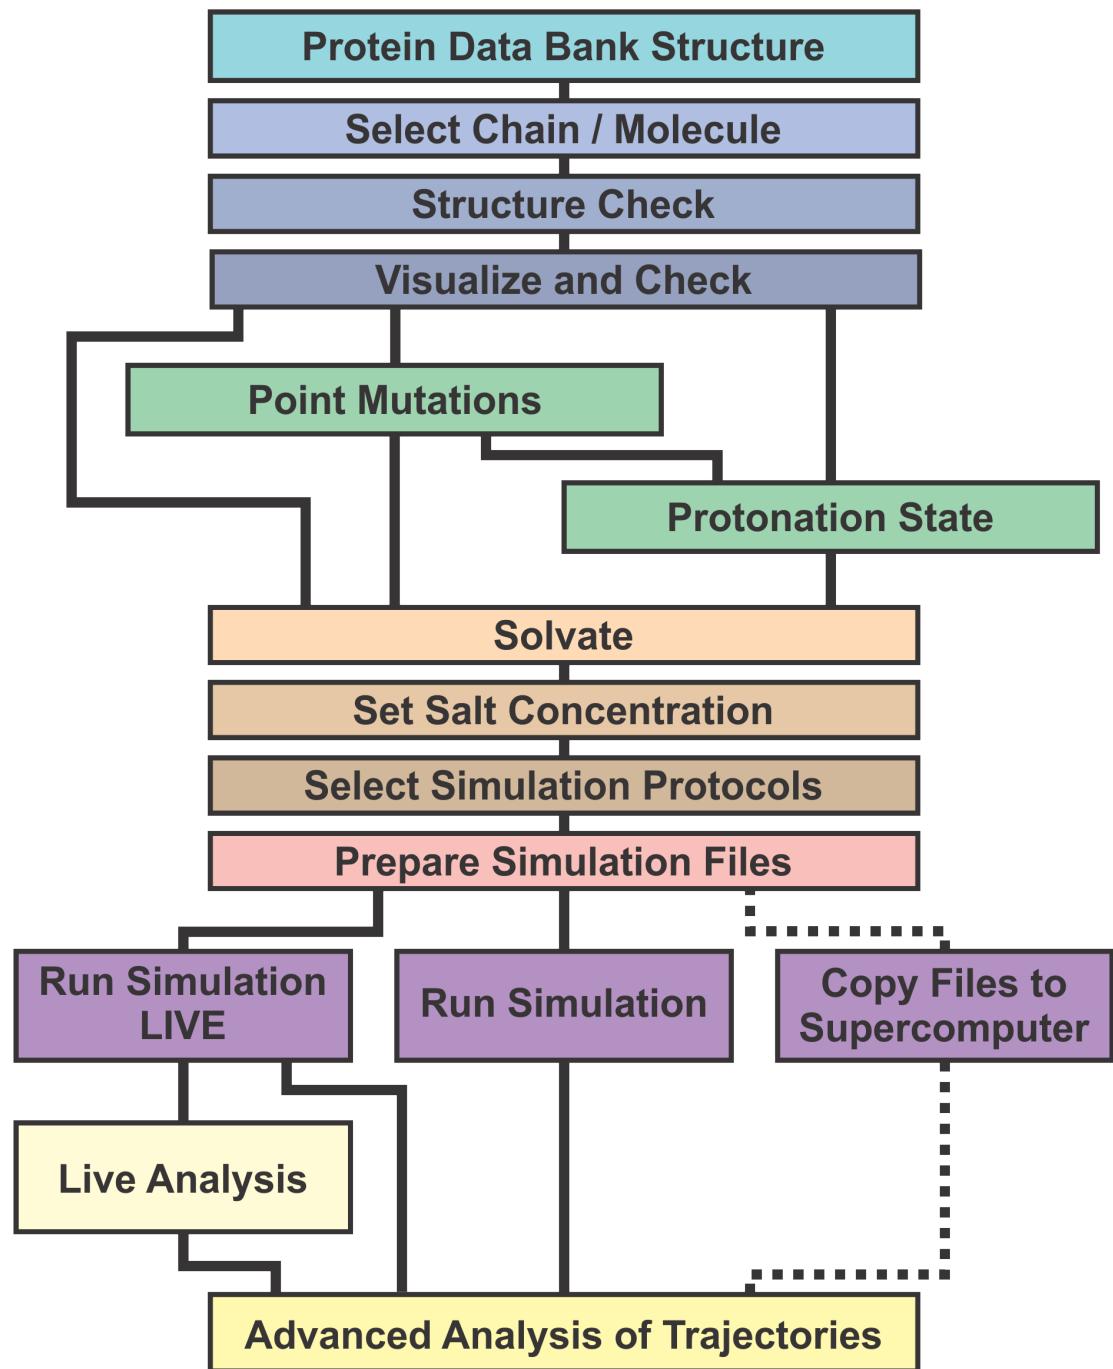

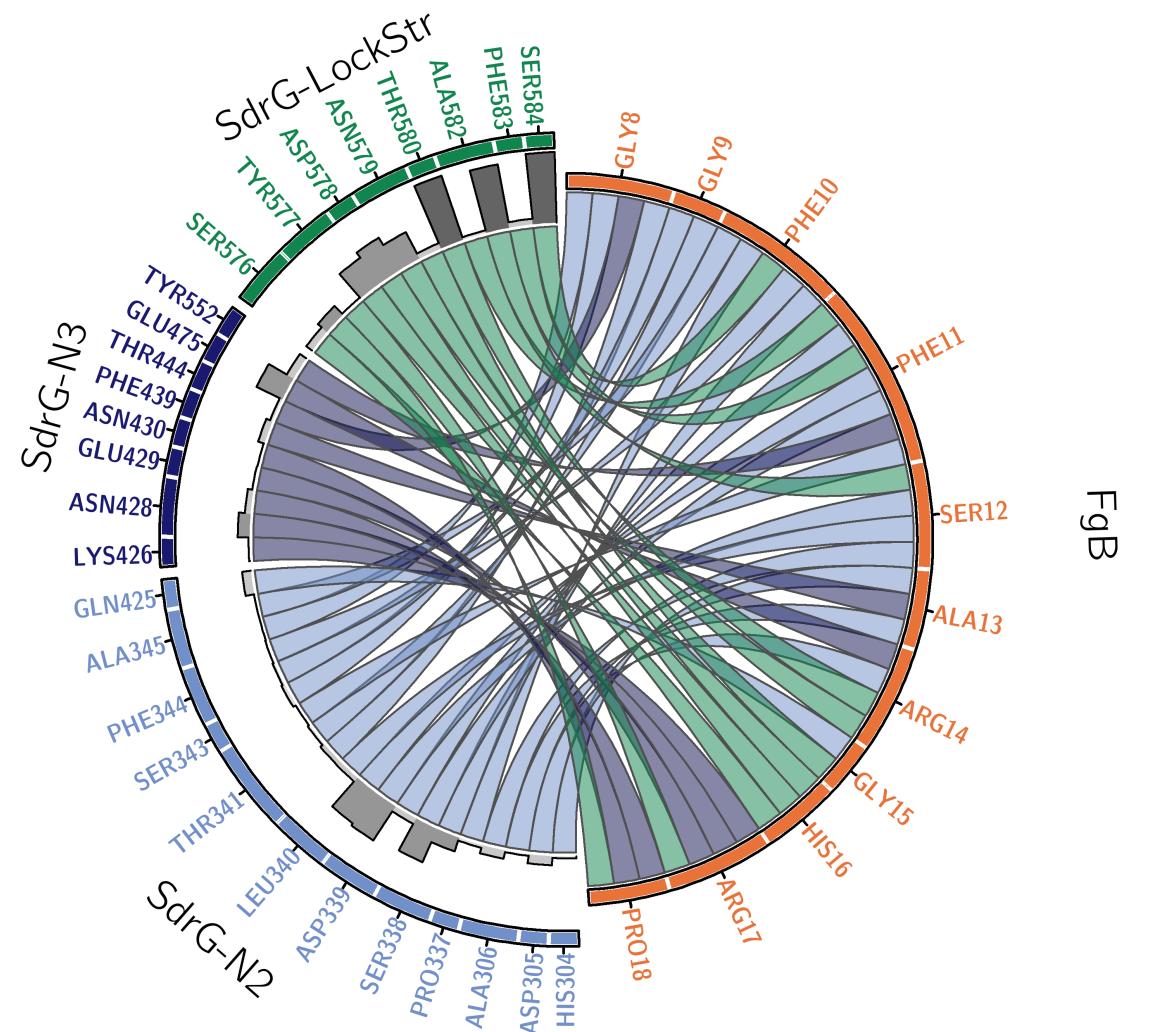

QwikMD: step-by-step

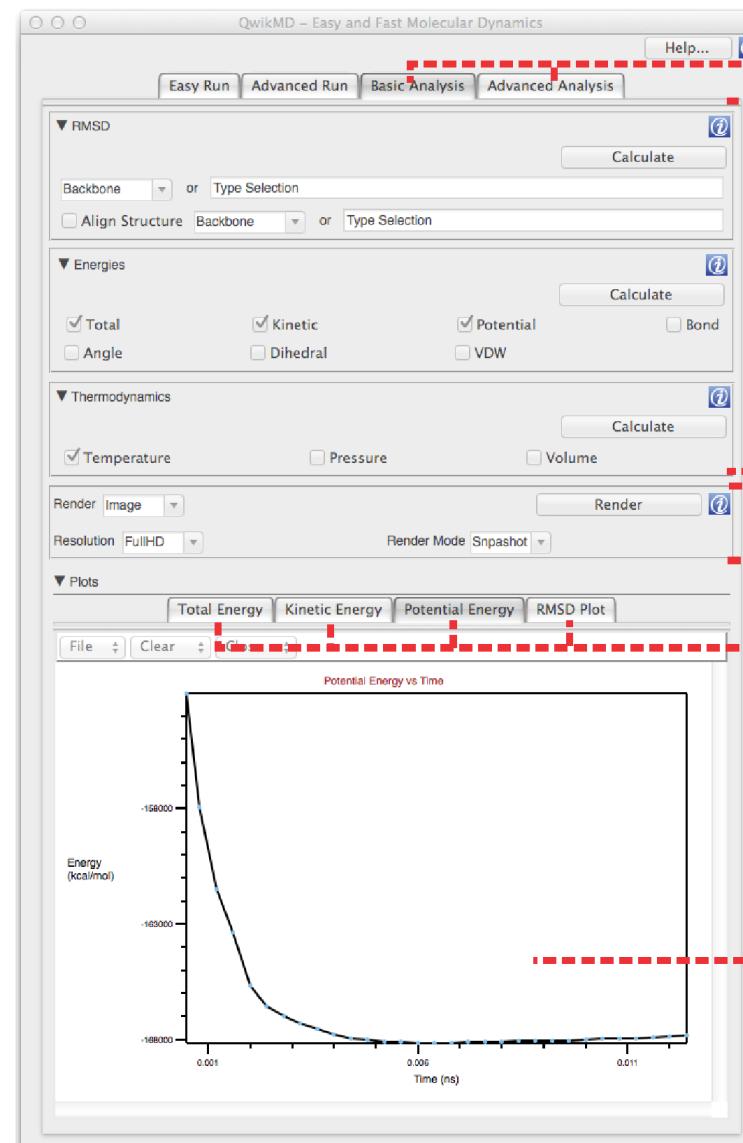

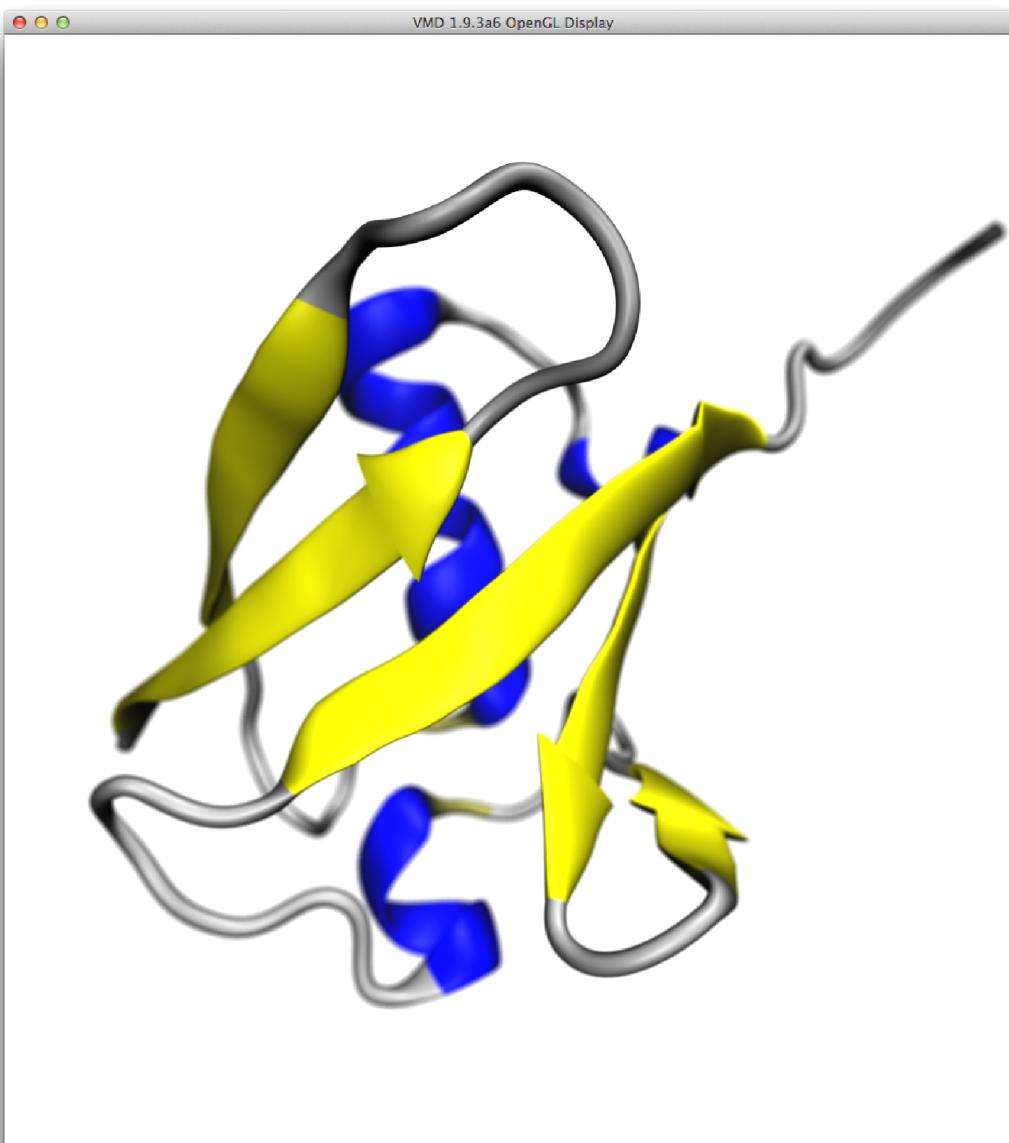

QwikMD: step-by-step

QwikMD: step-by-step

QwikMD: step-by-step

QwikMD users can select between:
(1) "Basic Analysis", which include most common analysis methods used to check how stable is the structure in the simulation; or (2) "Advanced Analysis", which includes several of the most used analysis tools in VMD, i.e., Hydrogen Bond count, and Solvent Accessible Surface Area (SASA).

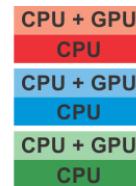

Here the user can select the analysis to be performed when "Calculate" is clicked.

VMD is known for its structure image rendering capabilities. In QwikMD a quick-render tab allows for a fast high-quality rendering, employing the most used settings for shadows, colors, materials, ...

Multiple analysis can be performed at the same time. The resulting plots will be presented in different tabs.

In a simulation on live view mode the plot will be updated while the simulation is performed

How much can I do with a Desktop computer?

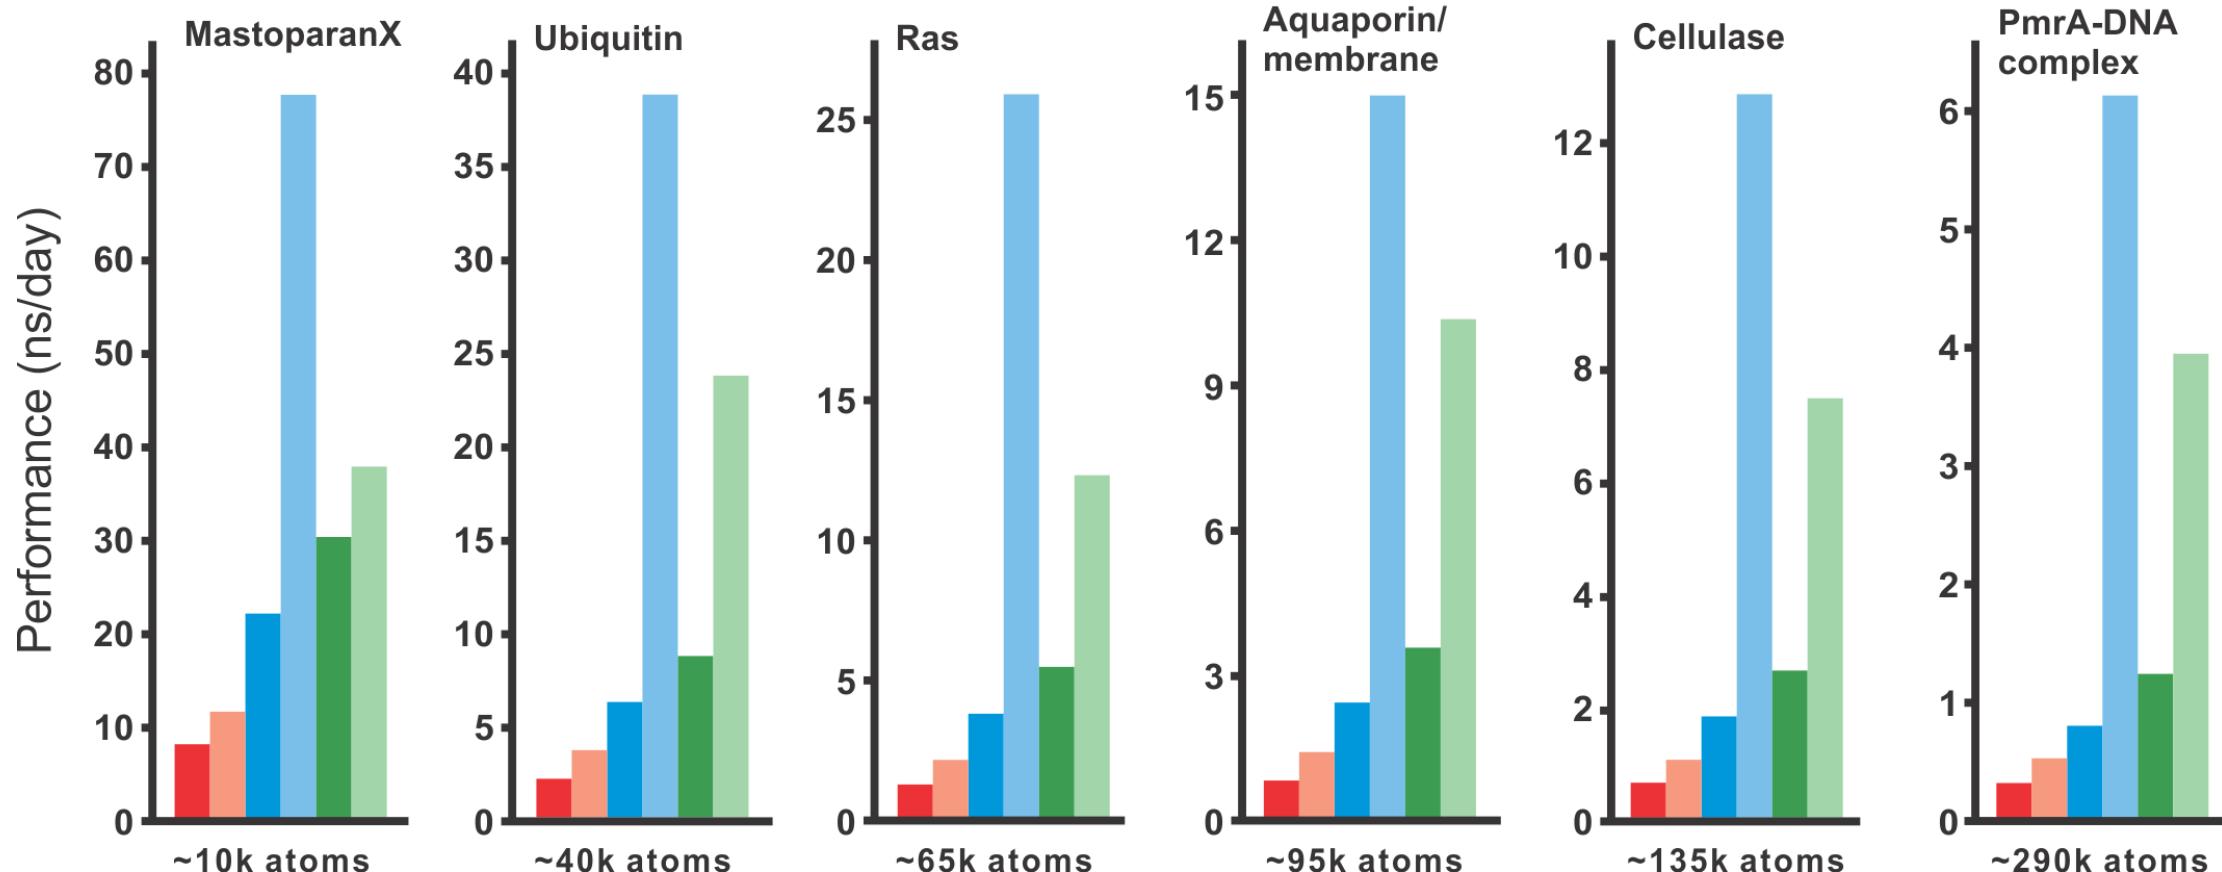

Laptop: MacBook Pro (Late 2013 model) - Intel Core-i7 2.3 Ghz (4 CPU cores) - 16GB RAM - NVIDIA GeForce GT 750M

OLD BENCHMARKS

Desktop: Dual Intel E5-2650v2 2.6 Ghz (8 CPU cores each) - 64GB RAM - NVIDIA GeForce GTX Titan X

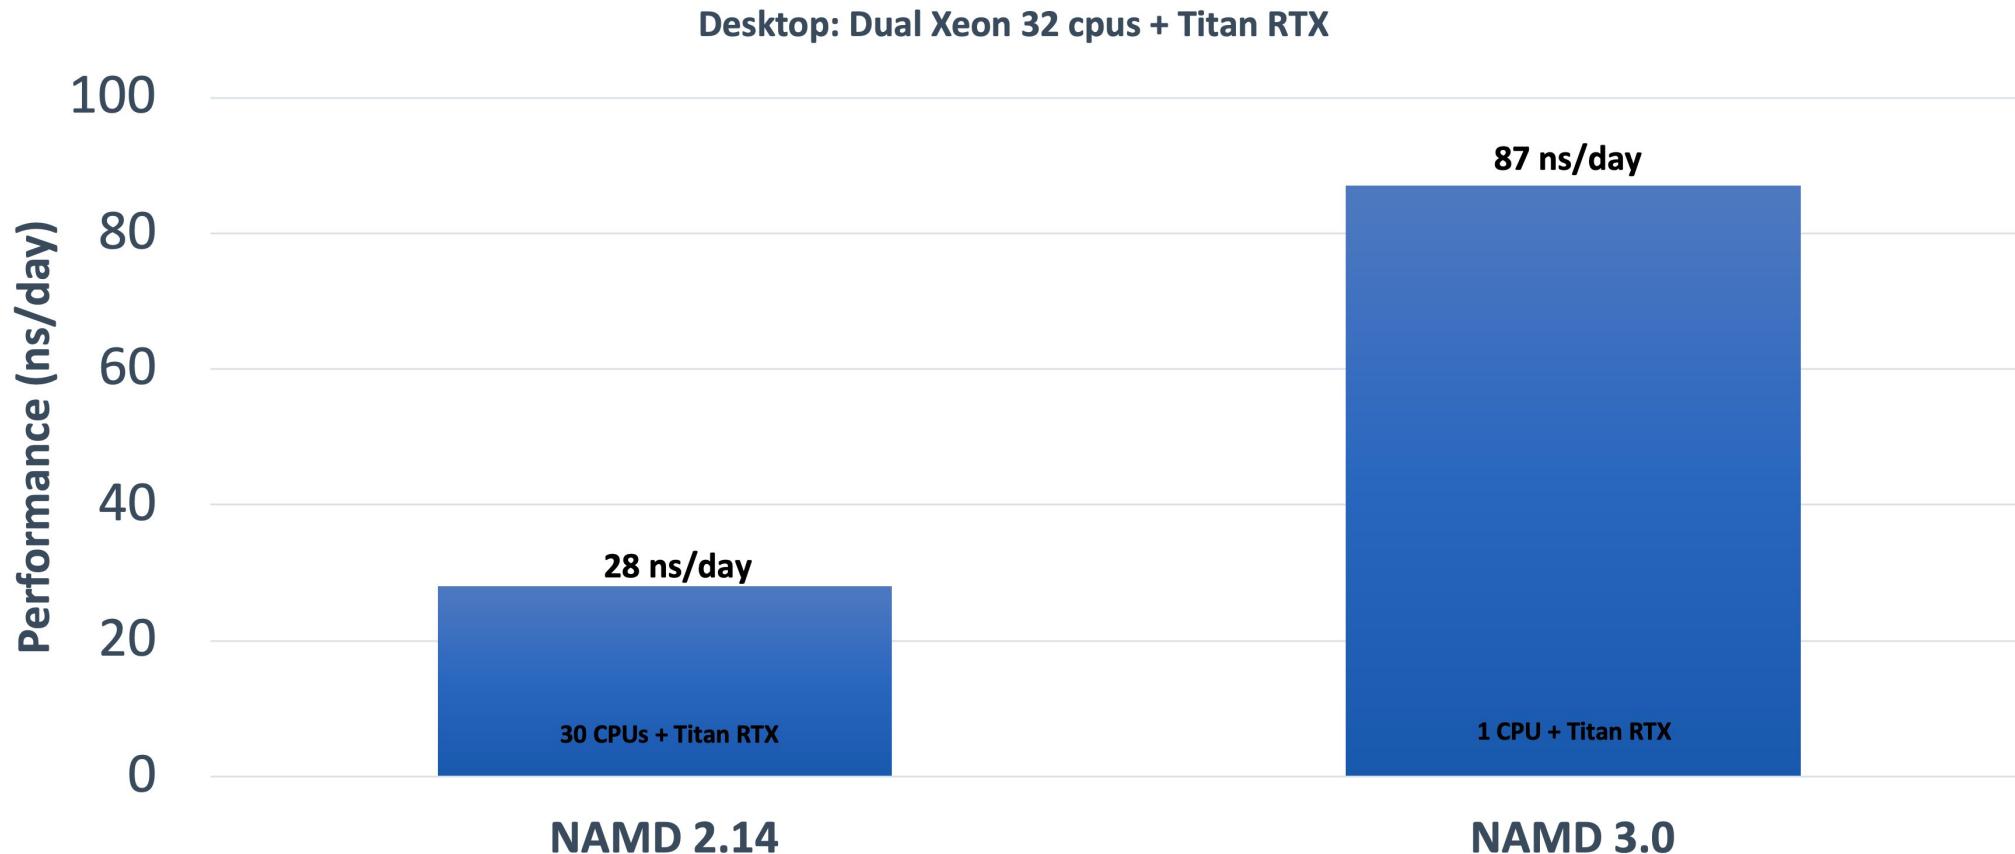

Cloud: G2.8 instance of the Amazon Elastic Compute Cloud

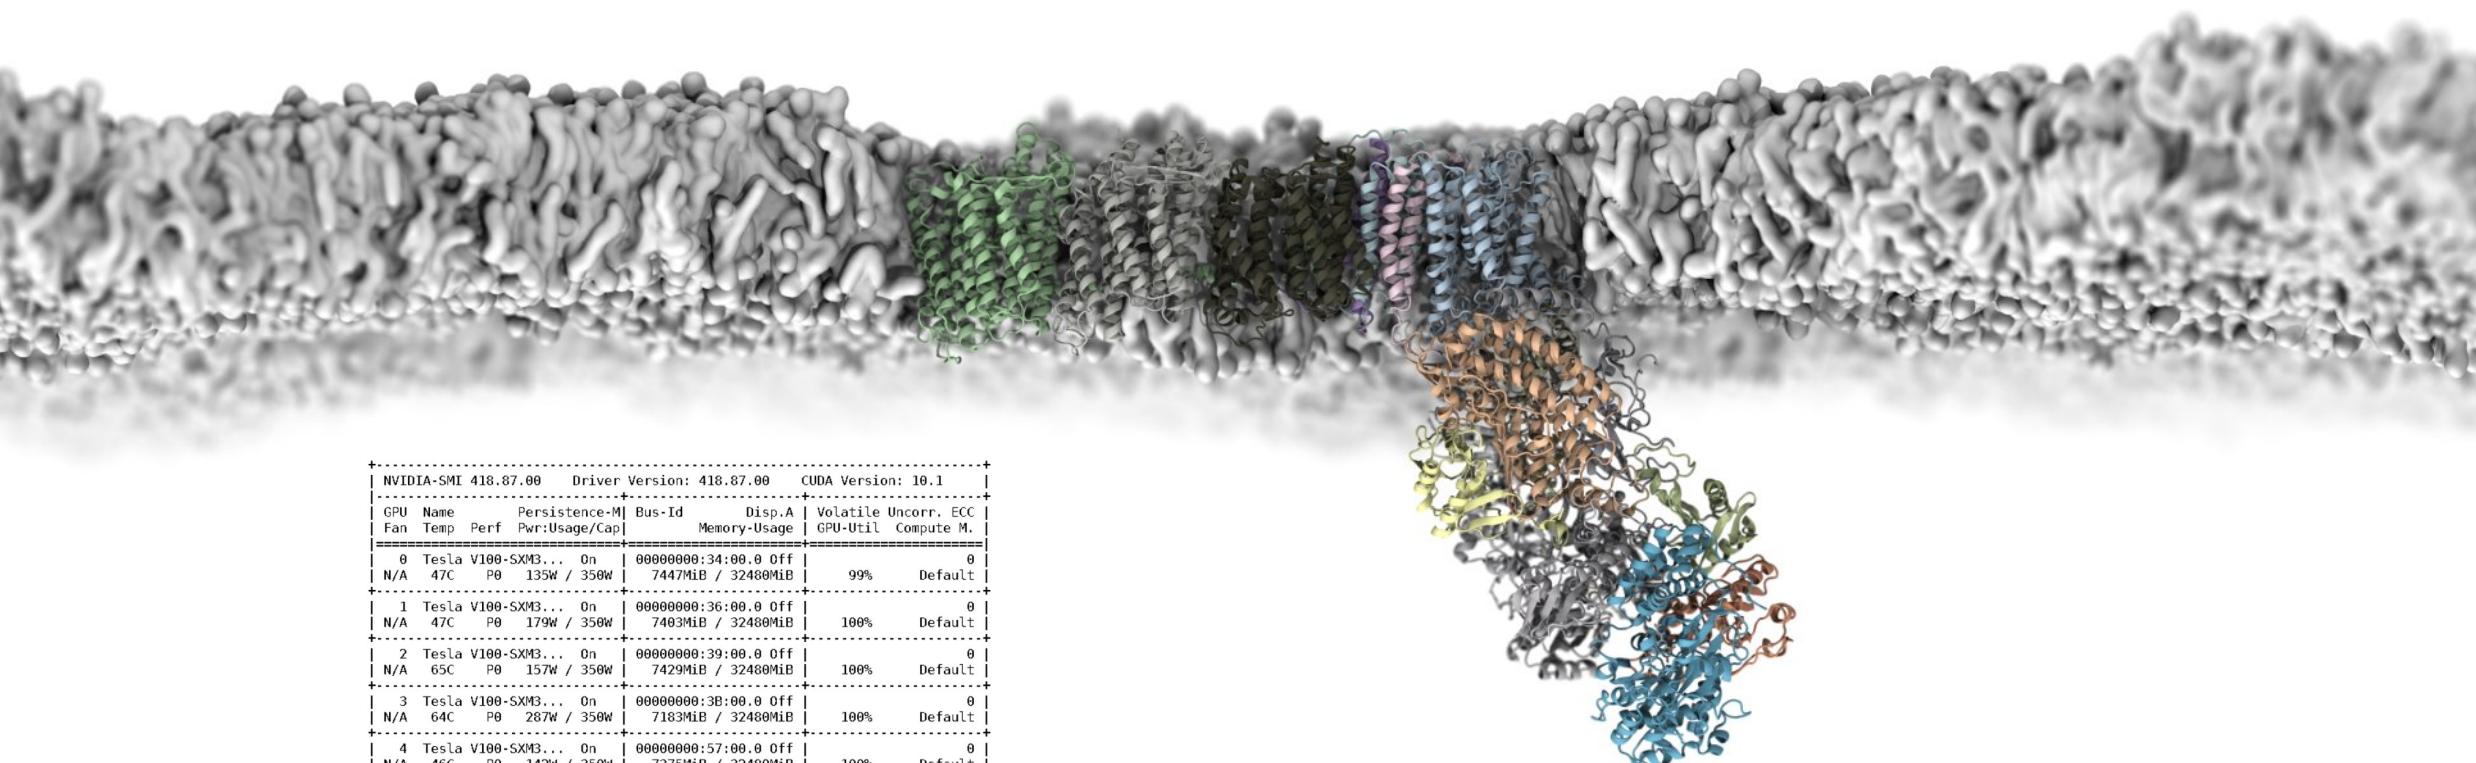

Cloud: C4.8 instance of the Amazon Elastic Compute Cloud

How much can I do with a Desktop computer?

NAMD Benchmark - ~100k atoms system – 2fs time step – 12A cutoff

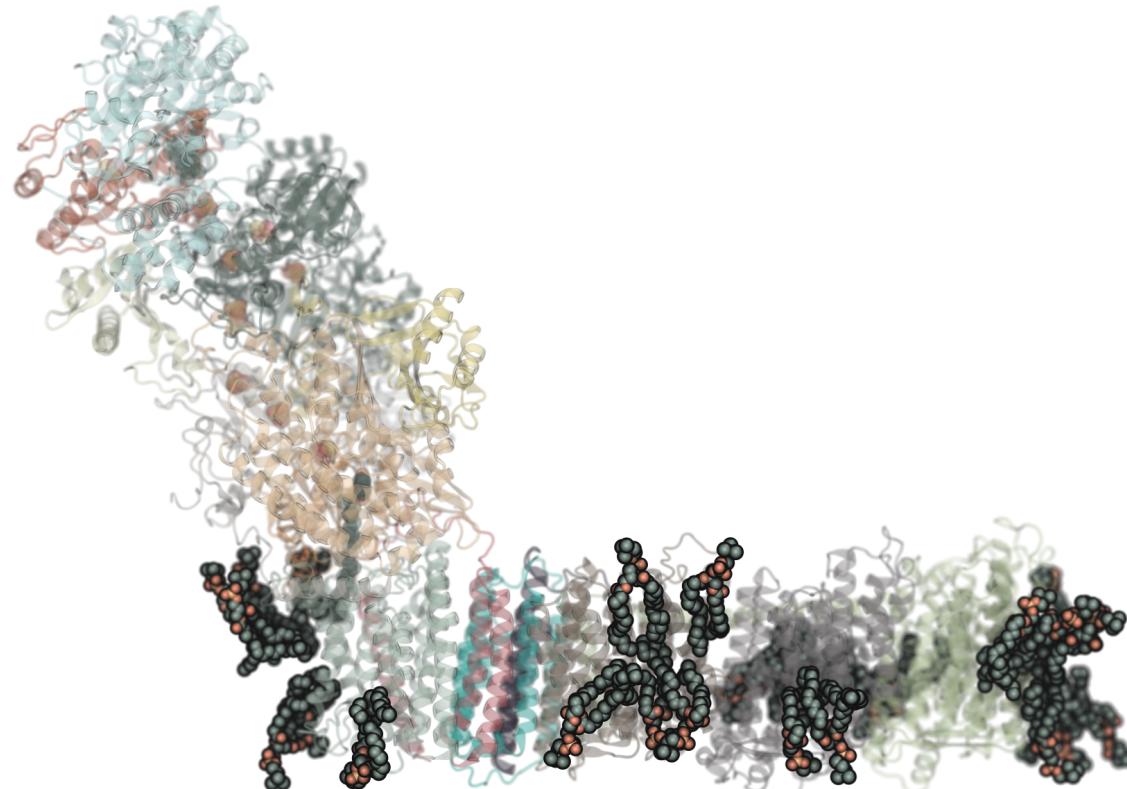

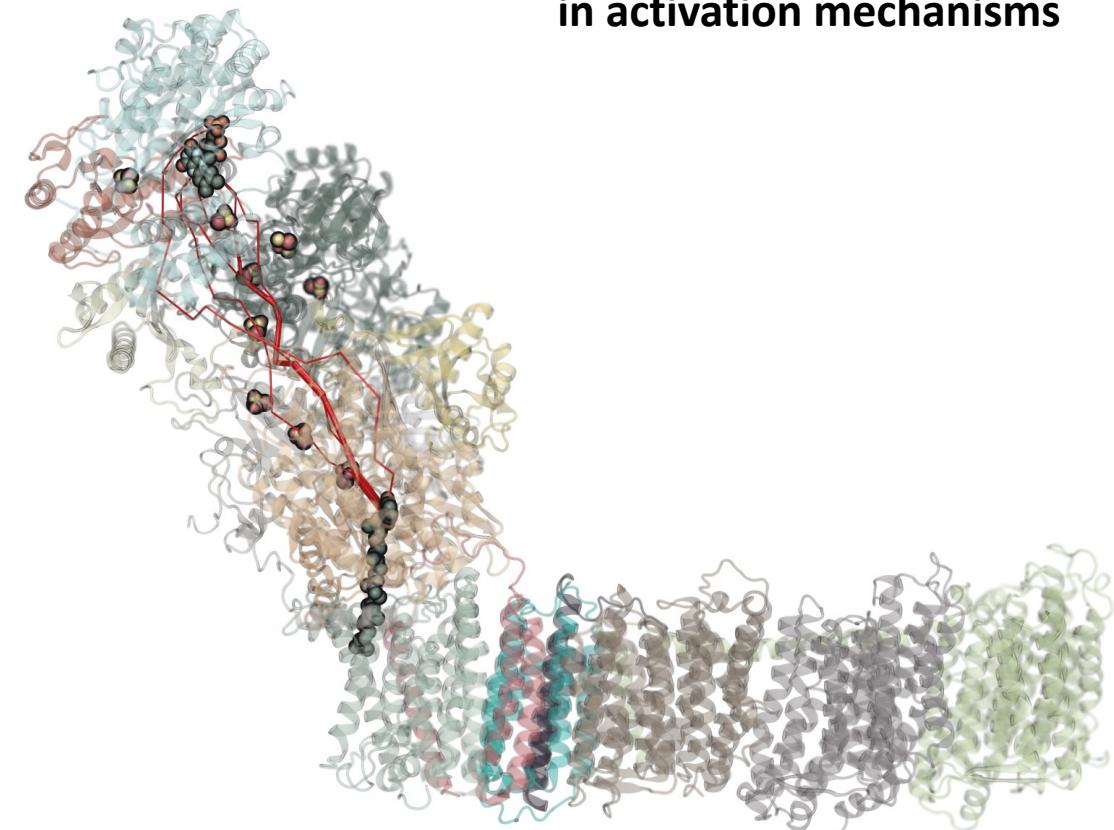

**NAMD3 on the NVIDIA DGX-2
2.5 M atoms transmembrane complex
up to 130 ns/day with a 4fs timestep**

Why do I want all this computational power?

Study the stability of lipid/protein interaction

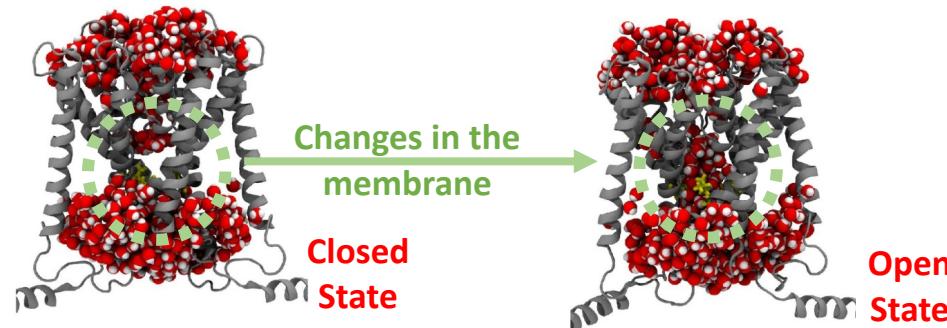

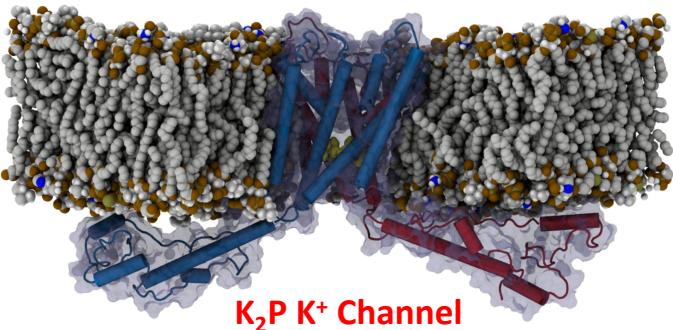

Study allosteric communication
in activation mechanisms

MCR Melo, [RC Bernardi](#), et al.; Generalized correlation-based dynamical network analysis: a new high-performance approach for identifying allosteric communications in molecular dynamics trajectories. JCP, 2020

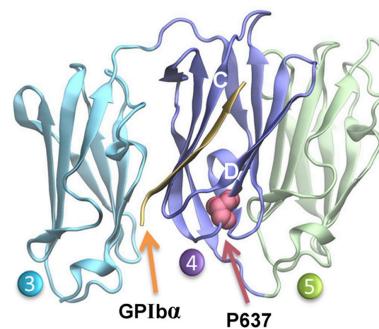

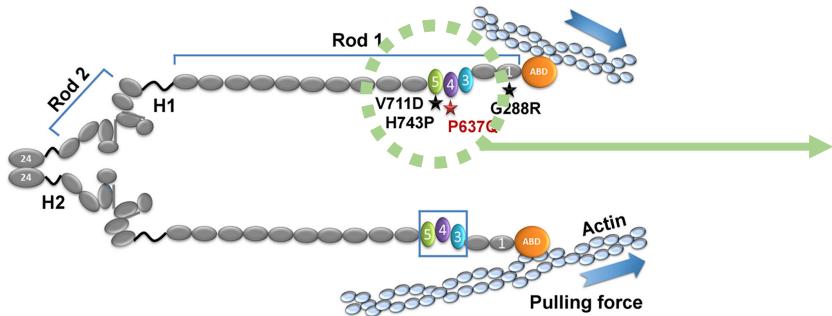

Why do I want all this computational power?

- Mechanosensing activates signal transduction in neurons;

PhD Work
RC Bernardi, et. al.; Molecular Physics, 2009
RC Bernardi & PG Pascutti; JCTC, 2012

- Mechanical stress alters Filamin affinity to molecules in the cytoplasm;

Mutations in Filamins are
associated with genetic diseases

Collaboration with Ulla Pentikäinen
University of Jyväskylä, Finland

J Seppälä & RC Bernardi, et. al.; Scientific Reports, 2017
TJK Haataja & RC Bernardi, et. al.; Structure, 2019

- Bacteria adhesion is mostly regulated by mechanoactive proteins.

Hydrogen Bond Network

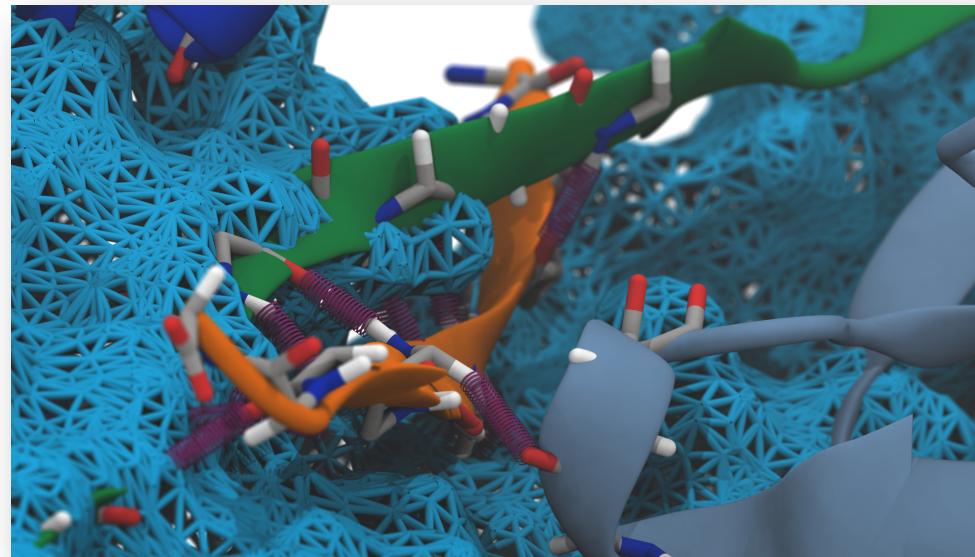

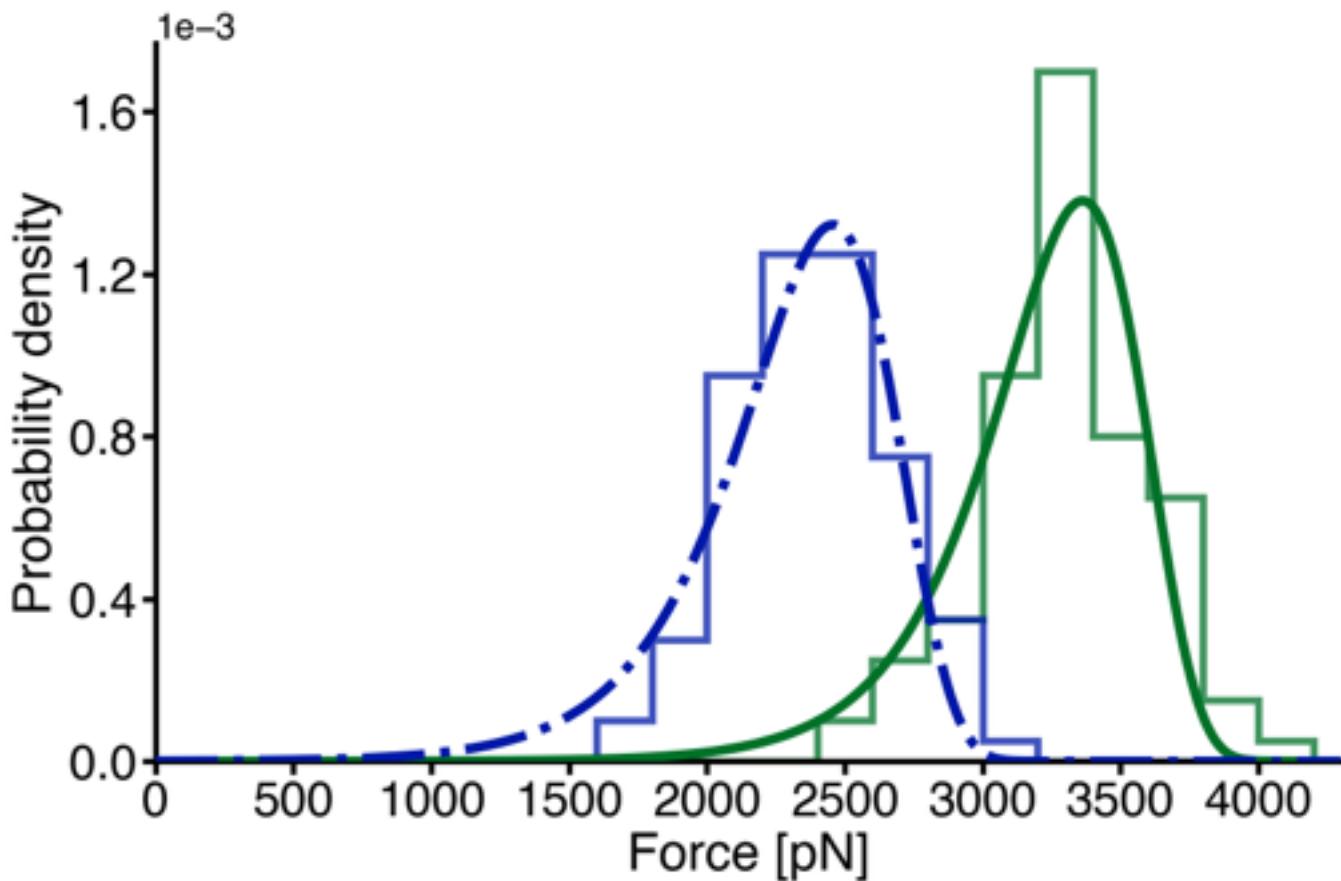

βgB

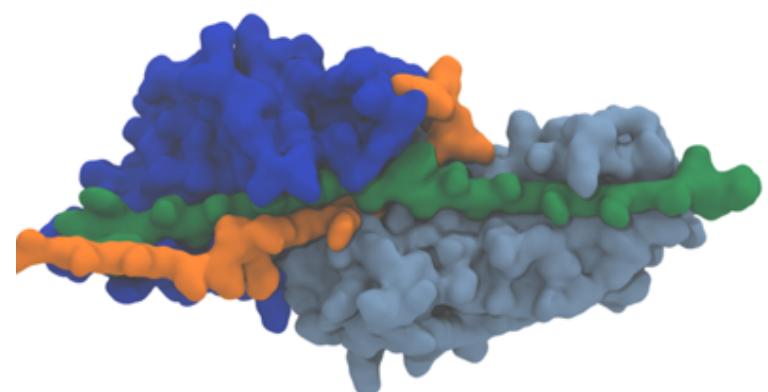

Side-chain Independence: Sequence Independence

Amino acid sequence is very important for binding affinity, but once it is bound even a polyglycine would become hyperstable

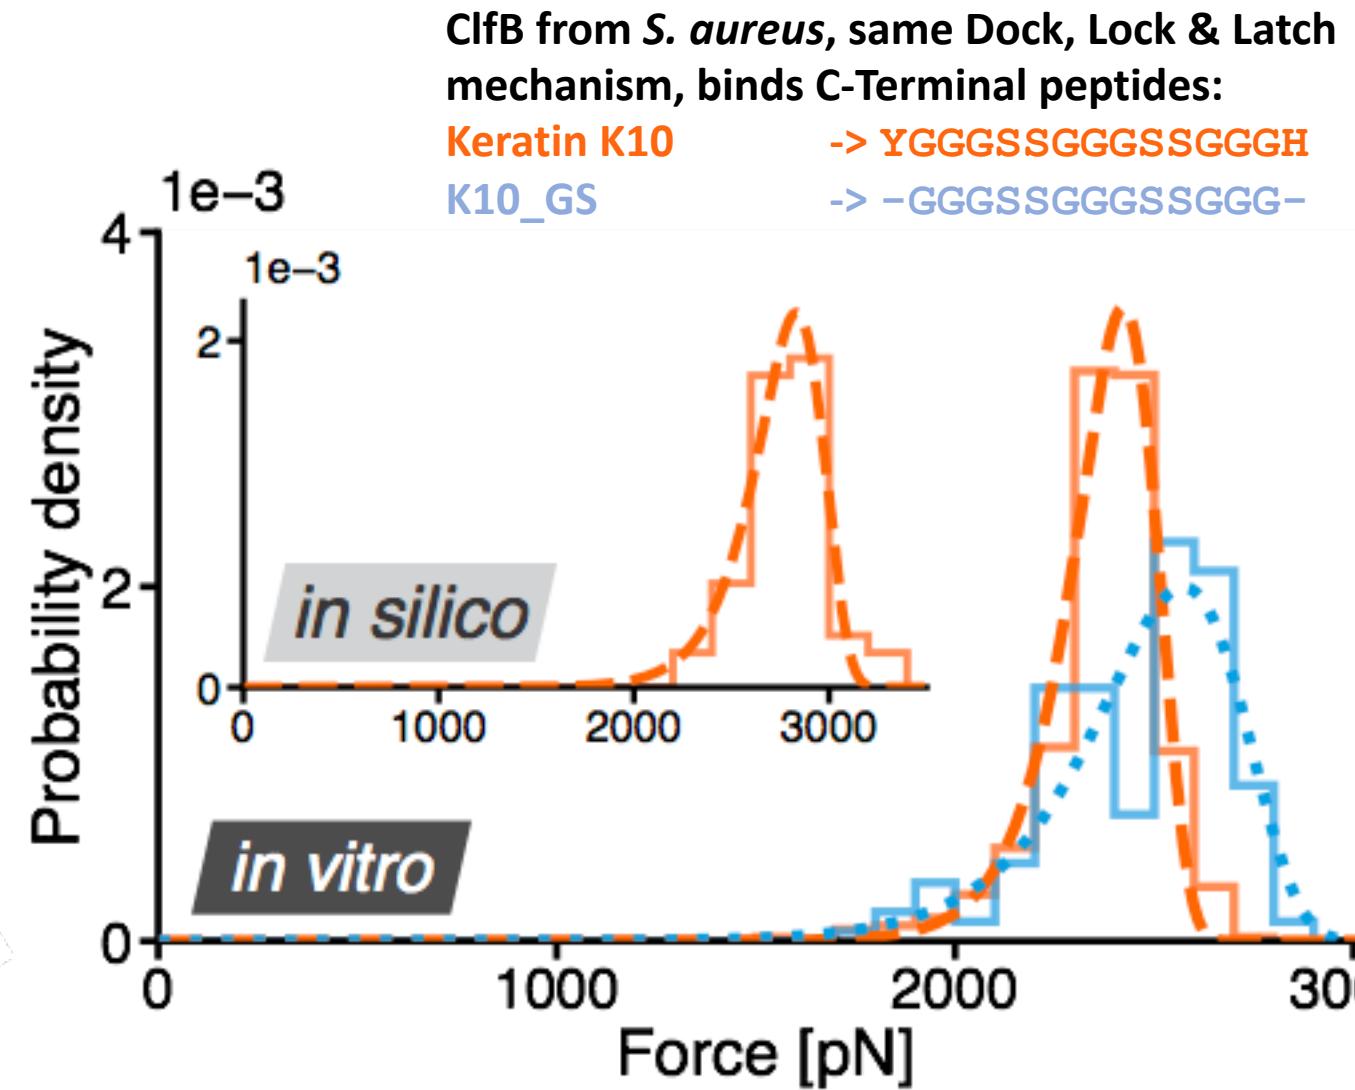

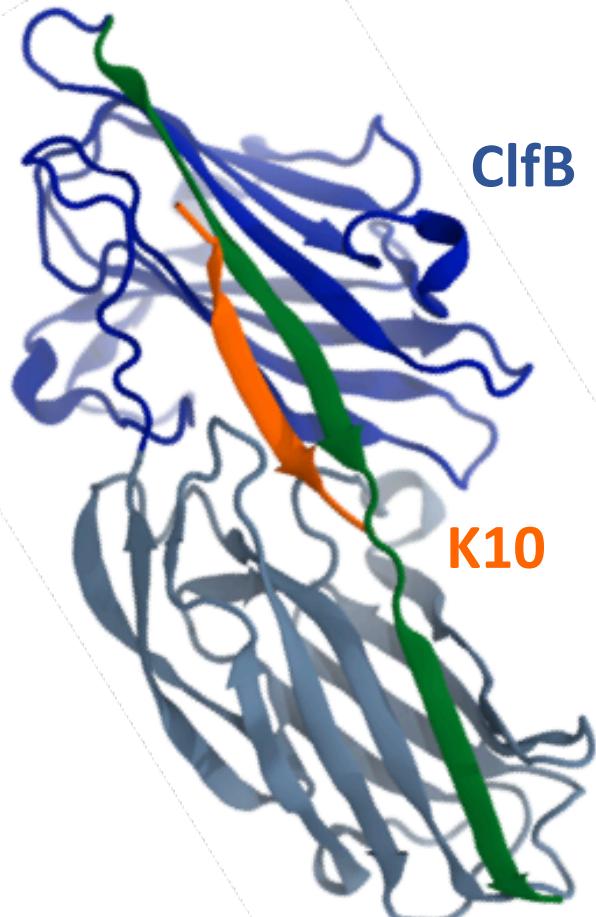

Strong Confinement

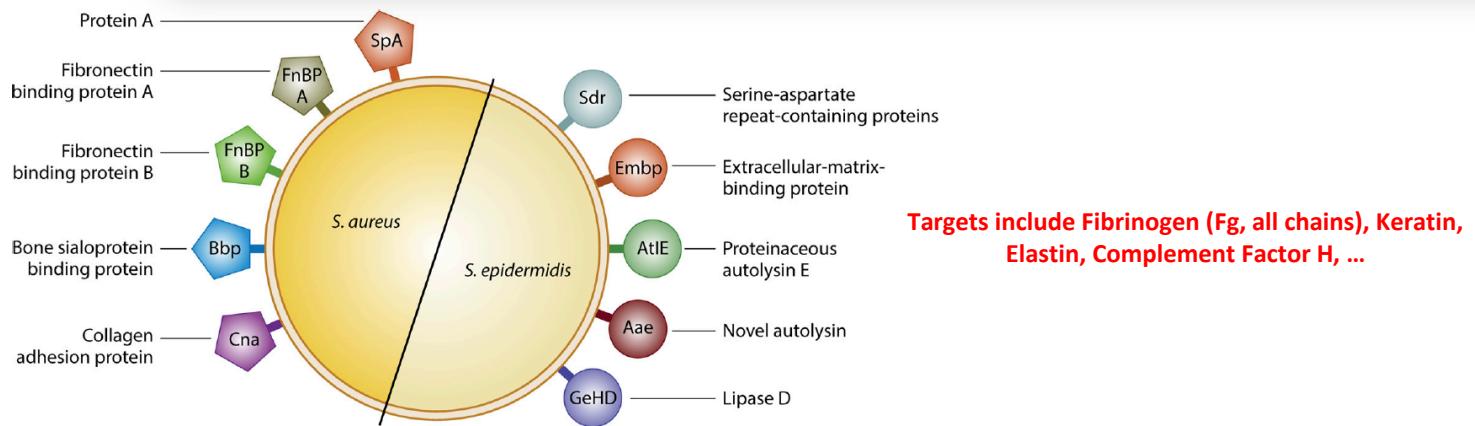

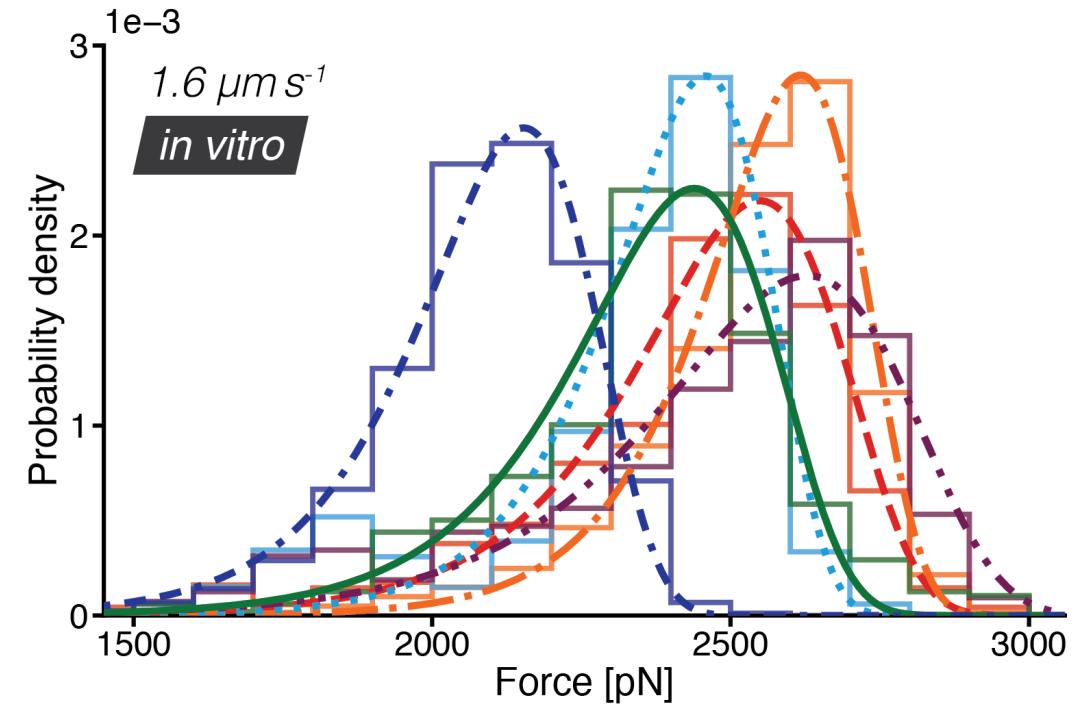

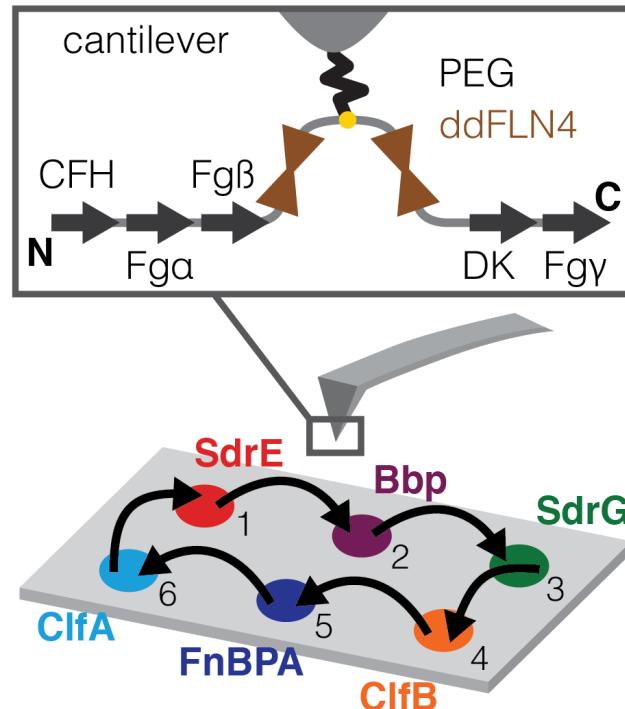

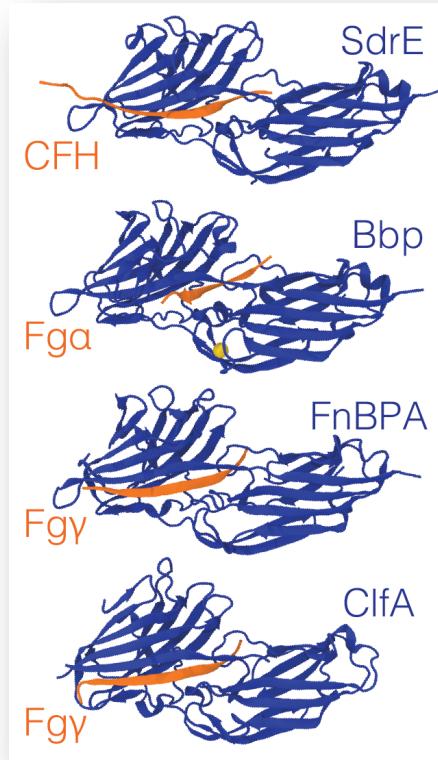

Sequence Independence? Isn't it just a computer nonsense?

A sequence of GS-repeats is sufficient to withstand 2nN

Sequence Independence: A Huge Evolutionary Advantage!

Evolution needs to find a better binder; mechanical resilience comes for free!

And what now?

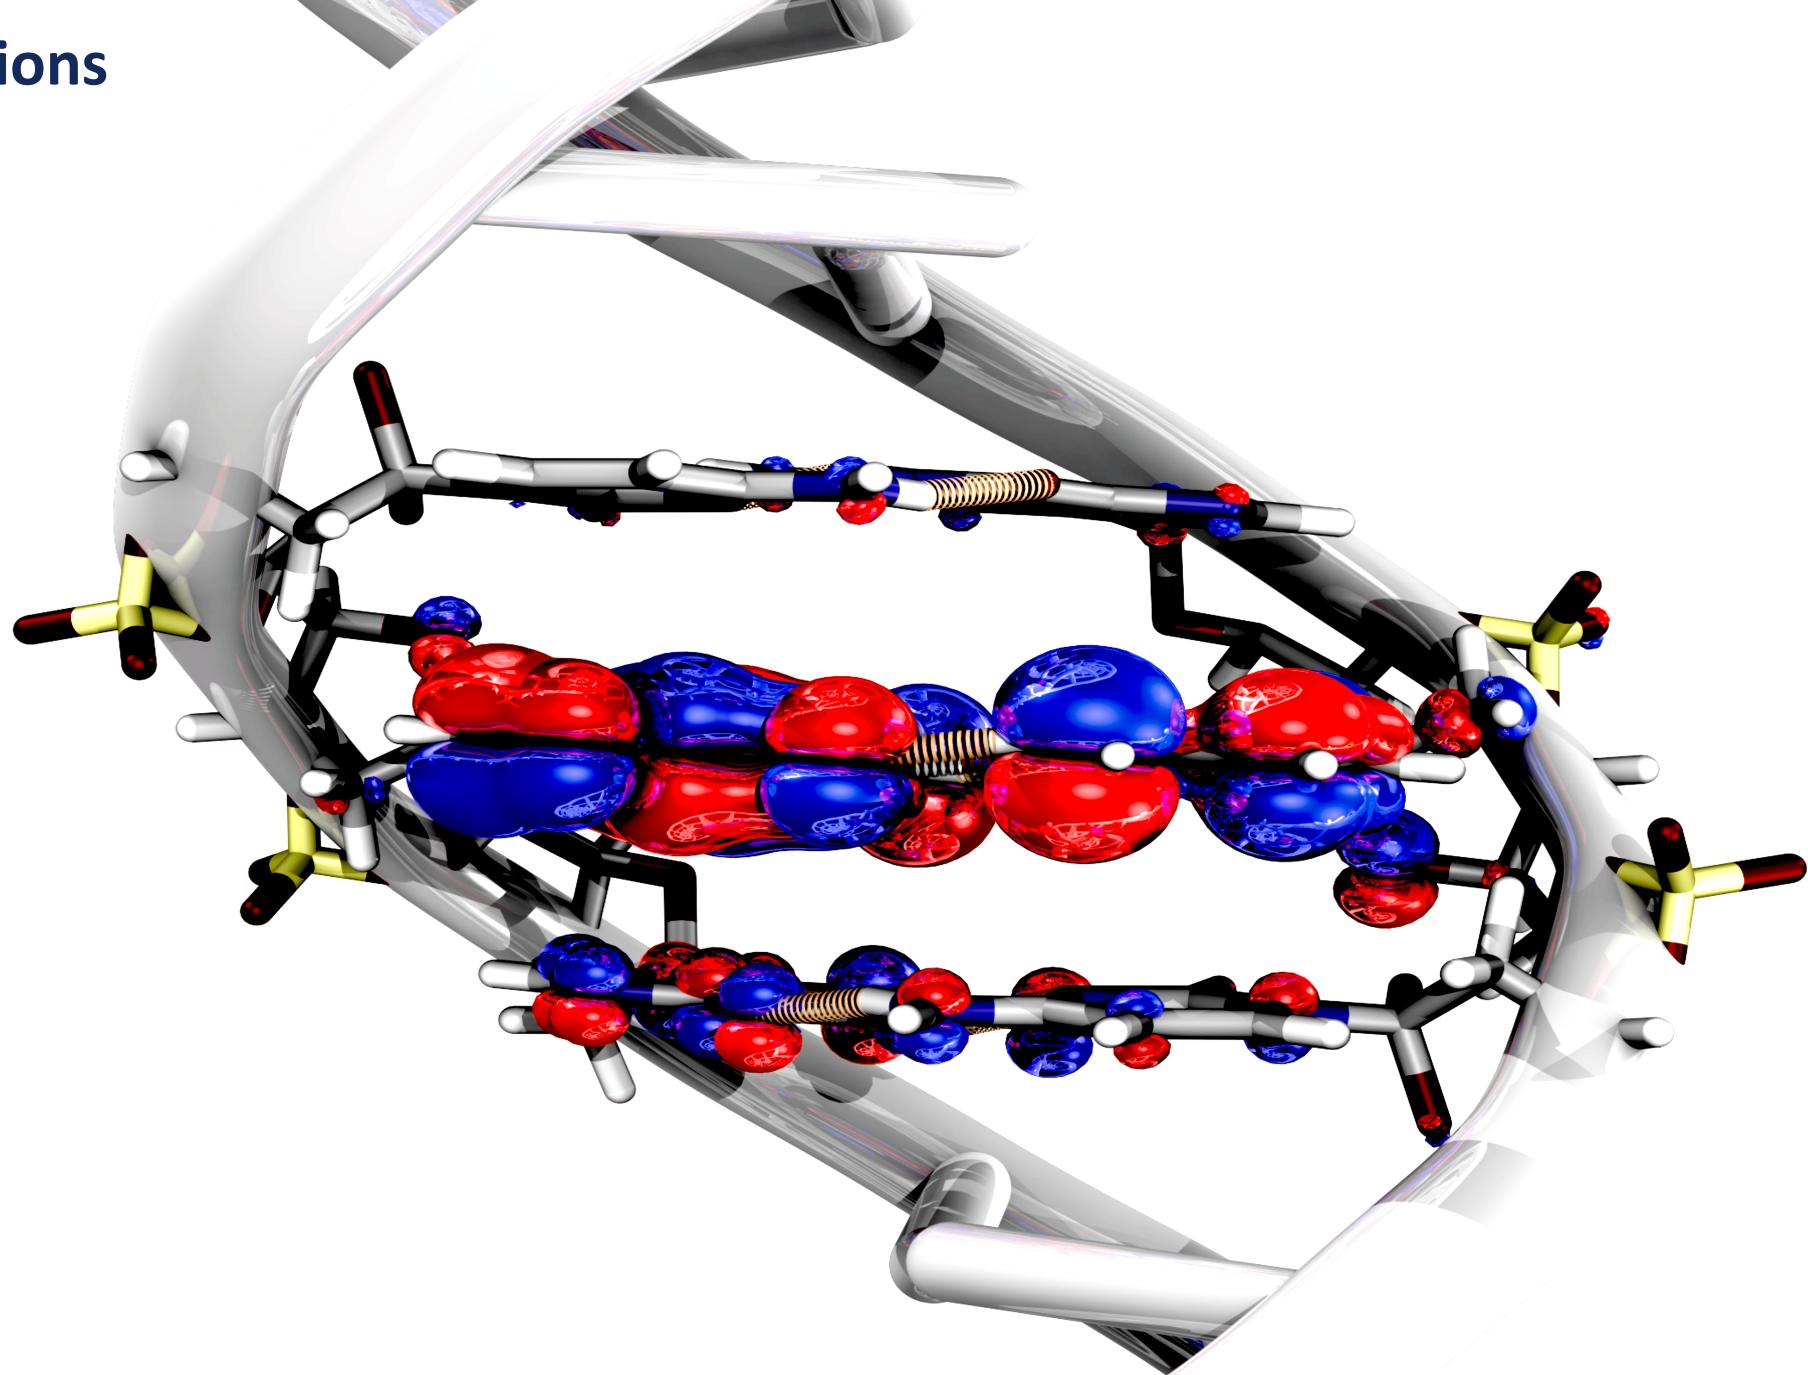

LF Milles, K Schulten, HE Gaub, RC Bernardi; Molecular mechanism of extreme mechanostability in a pathogen adhesin. *Science*, 2018

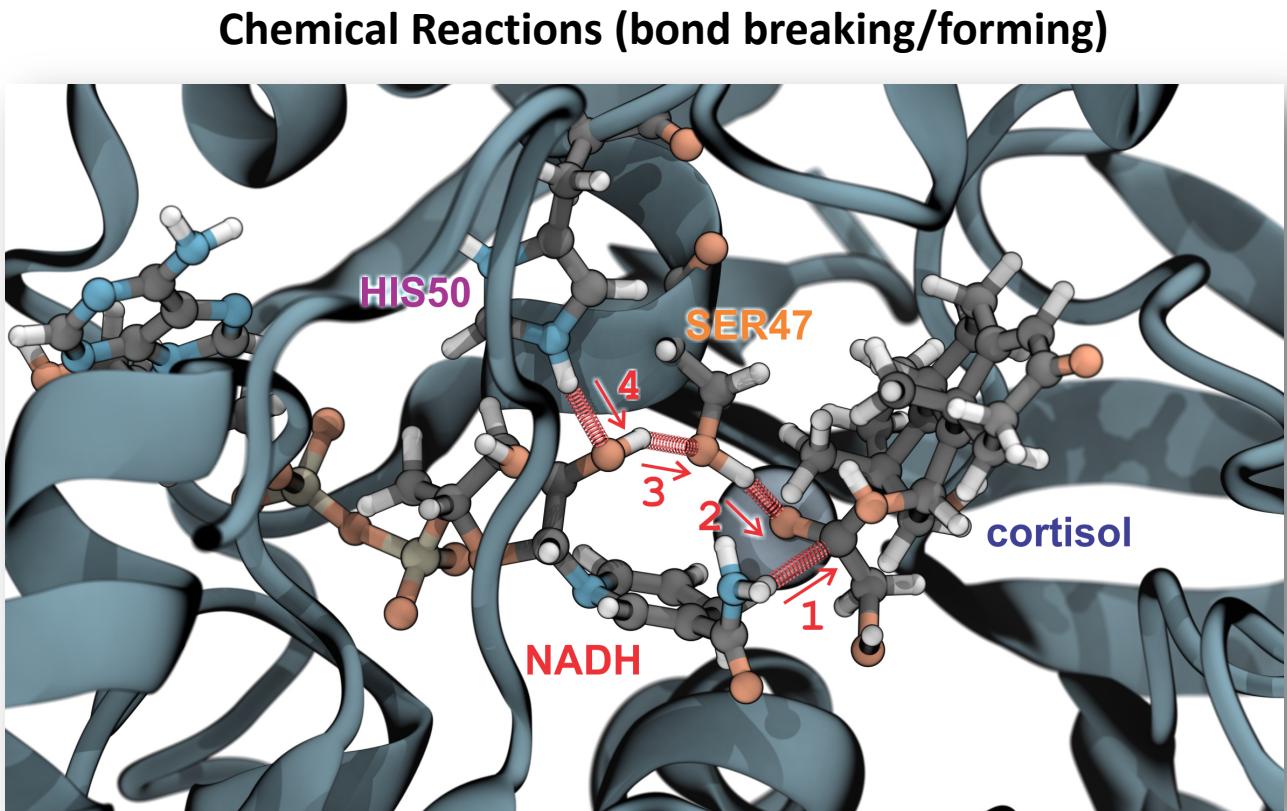

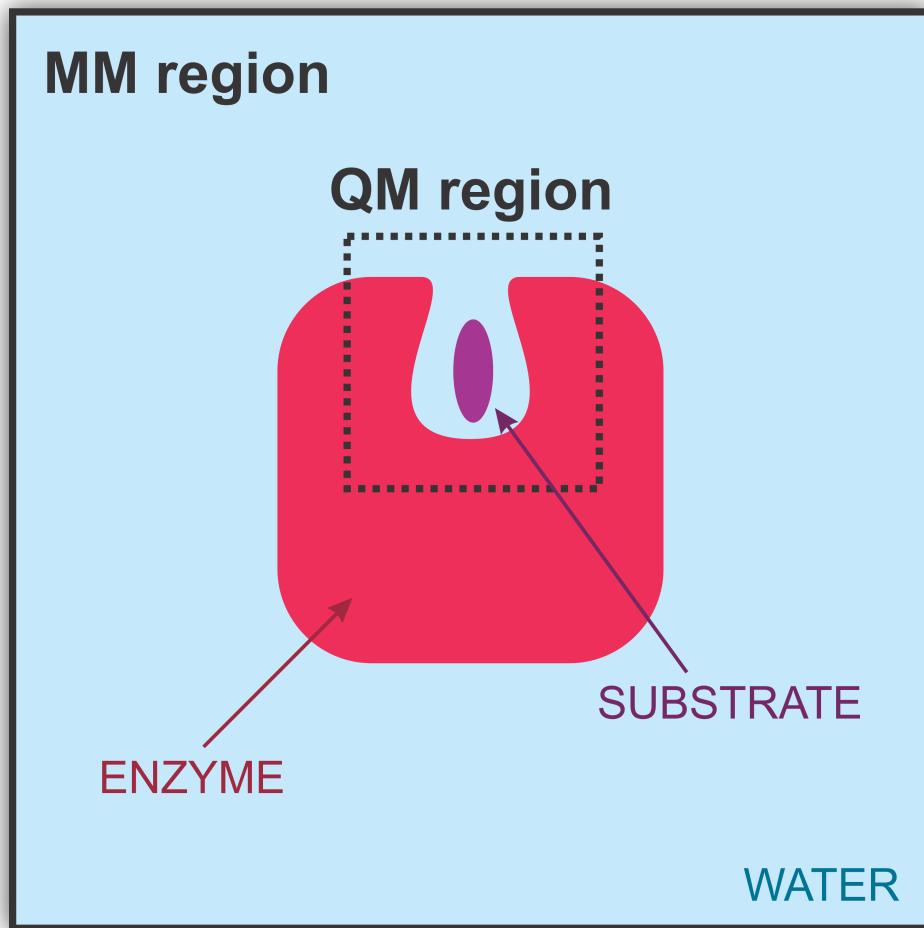

What else can we do with QwikMD?

What if I don't have Force Field parameters for my molecule?

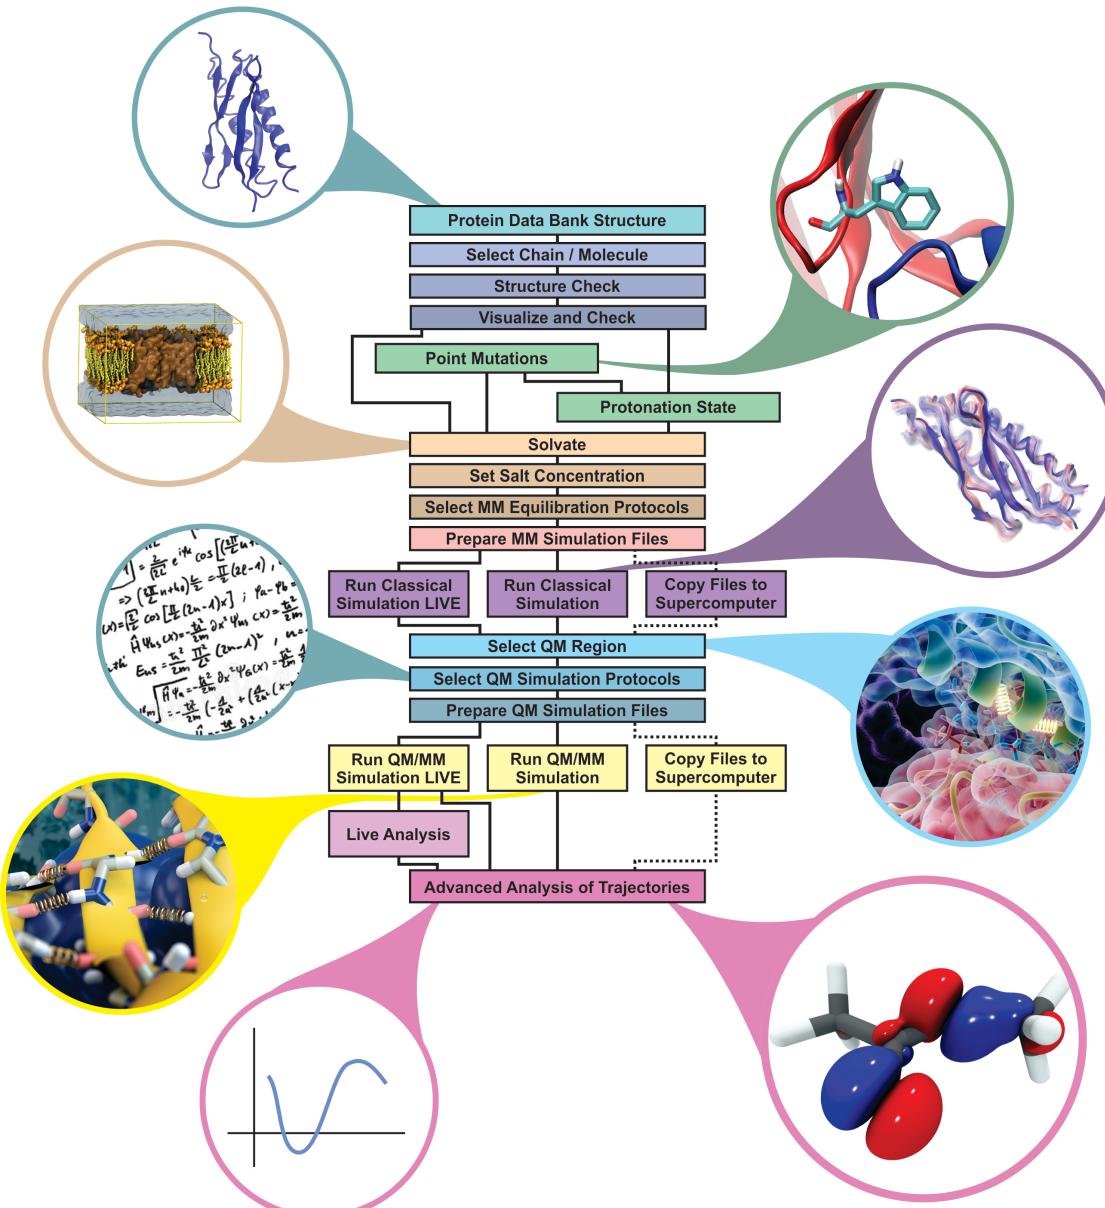

Hybrid QM/MM Simulations

Hybrid QM/MM Simulations

Hybrid QM/MM Simulations with QwikMD

QM/MM available in the Advanced Run Tab

A system can be prepared from scratch using a PDB code or browsing for a local PDB file. Alternatively, a previously prepared system can be loaded after a Classical MD run, in order to start a QM/MM simulation.

The Protocol section provides default configuration options for major simulation steps.

The QM Options section allows one to set relevant options related to electrostatic embedding, and to define how the QM calculation will be carried out by ORCA or MOPAC.

If no topology is available for a residue included in a QM region, QwikMD can create an artificial topology file so NAMD can load the system and execute the QM/MM simulation.

One must confirm the elements of all atoms in the residue, as well as the total charge of the residue.

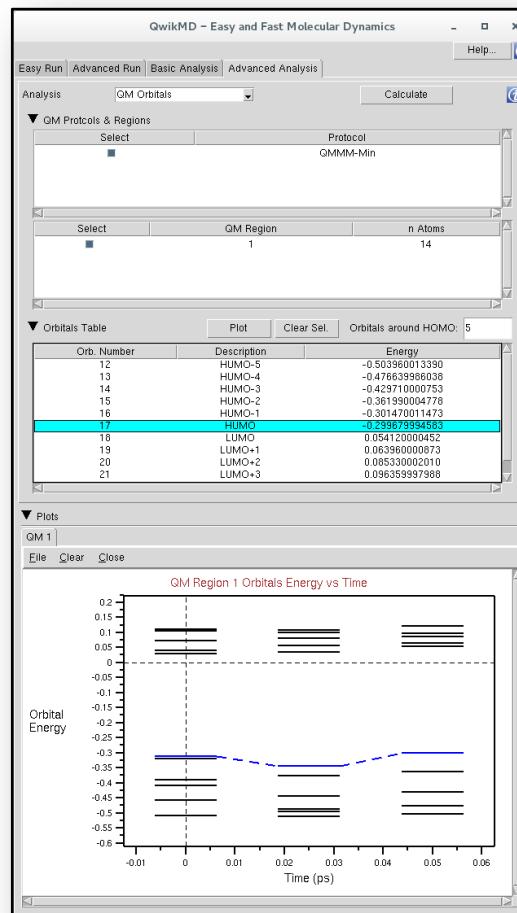

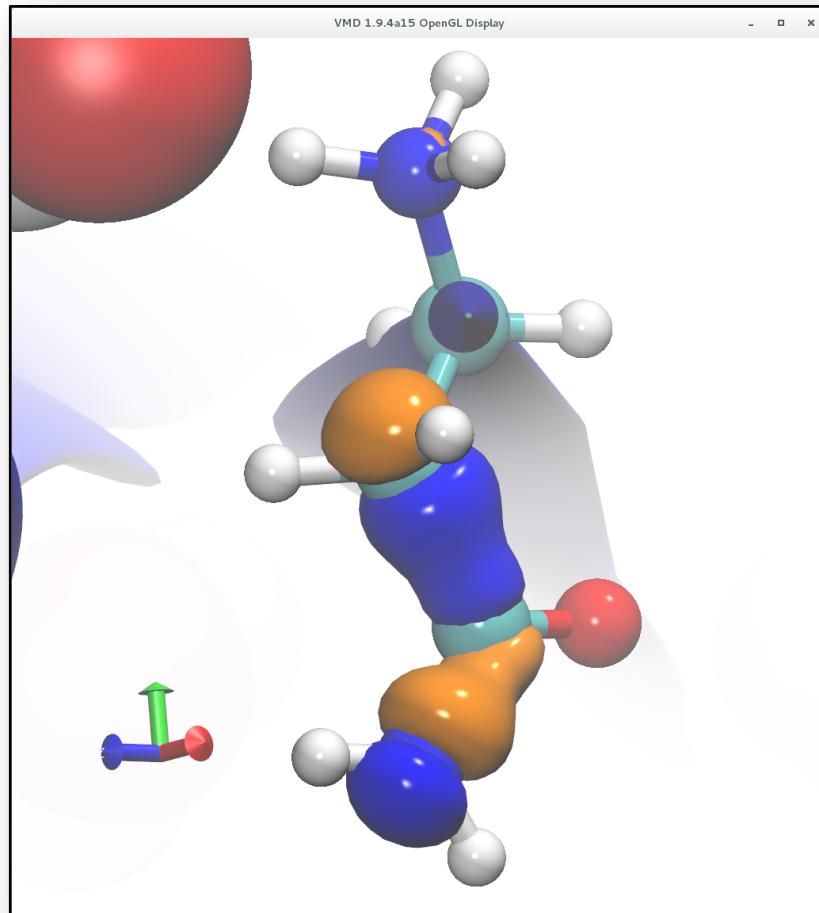

The Structure Manipulation window allows one to perform mutations and other modifications to one's system, as well as selecting or creating topologies for new molecules, such as drugs and metabolites.

Structure Manipulation Window Screenshots:

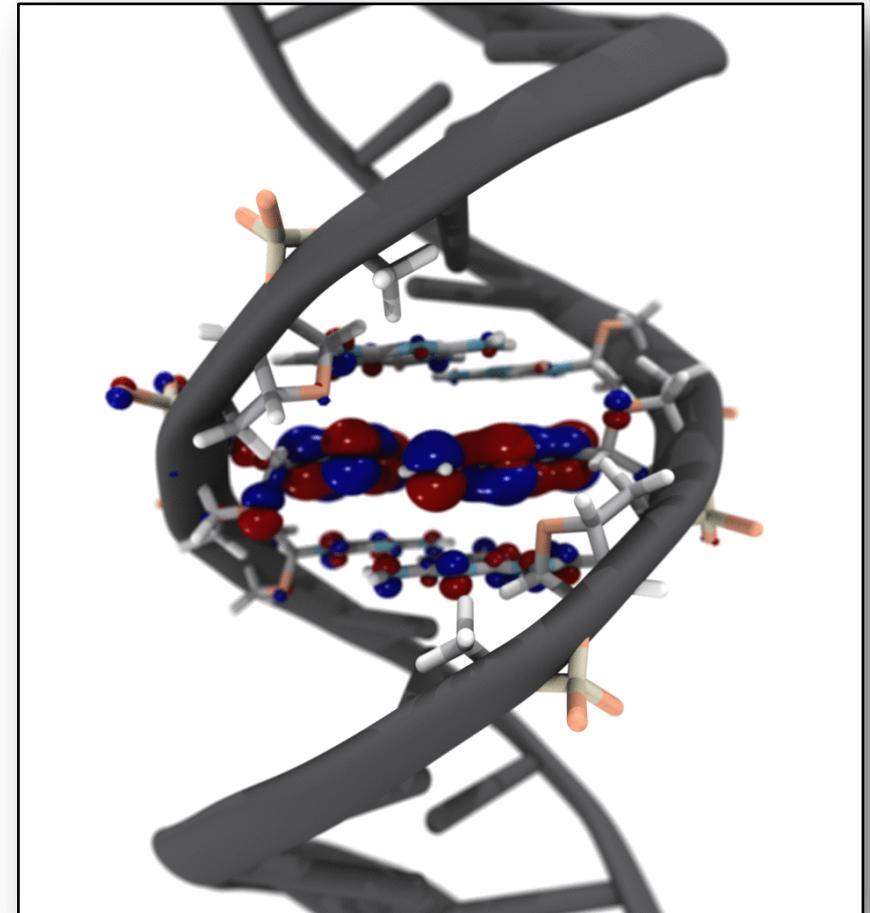

- Structure Manipulation Tab:** Shows a table for selecting residues (Res ID, Res NAME, Chain, Type) and various mutation and selection tools.
- Protocol Tab:** Shows simulation parameters like Solvent (Explicit), Solvent Concentration (0.15 mol/L), and a table for QM Regions (e.g., QM ID 1, n Atoms 132, Charge 0, Mult 1, COM none).
- QM Options Tab:** Settings for QM Software (ORCA), Point Charges (On), Custom PC (Off), and QM Command (e.g., !B3LYP 6-31G* Grid4 PAL8 !EnGrad TightSCF).
- Simulation Setup Tab:** Buttons for Start Production Simulation 0, Pause, Detach, and Finish.
- Topology & Parameters Selection Tab:** Table for Residue NAME, CHARMM NAME, type, and Topo & PARM File.
- Generate QM Region Topology Tab:** Table for generating topology for residue NMA1, showing columns for Index, Resname, Res ID, Chain ID, Atom name, Element, Charge, Type, and RESI_NMA1.
- Generate Missing QM Region Topology Tab:** Table for generating missing topology for residue NMA1, showing columns for Index, Resname, Res ID, Chain ID, Atom name, Element, Charge, Type, and RESI_NMA1.

Hybrid QM/MM Simulations with QwikMD

Orbital Analysis and Visualization Tools allow for fast and easy study of molecular orbital properties.

GPU-accelerated rendering in VMD allows for fast publication-quality rendering.

Take home messages

- QwikMD can assist the MD user from preparation of simulation all the way to analysis;
- Multiple Simulation Replicas are Necessary to have a Direct Comparison to Experiments (Wide Sampling Approach);
- In Biology, Force Resilience Depends on Force Application Geometry;
- Bonds Forming Contacts in Biomolecules can be Activated to Become as Strong as a Covalent Bond;
- Bacteria Adhesion Evolved so that their Mechanostability only Depends on Backbone:Backbone Interactions;
- Hybrid QM/MM simulations are now available in NAMD and QwikMD;
- Network Analysis can be used to calculate force propagation pathways and/or allosteric communications.
