Employing QwikMD, a user is able to prepare an MD simulation in just a few minutes, allowing studies of point mutations, partial deletions and even atomic force microscopy experiments.

QwikMD assists a new user in performing molecular dynamics (MD) simulations, while it also servers as a learning tool. Many "info buttons" provide the theoretical background underlying the MD procedures carried out in modern MD simulations.

"Certainly no subject or field is making more progress on so many fronts at the present moment than biology, and if we were to name the most powerful assumption of all, which leads one on and on in an attempt to understand life, it is that all things are made of atoms, and that everything that living things do can be understood in terms of the jigglings and wigglings of atoms."

**Richard Feynman** 

The Feynman Lectures on Physics: Mainly Mechanism, Radiation and Heat (1963)

#### Take home messages

- QwikMD can assist the MD user from preparation of simulation all the way to analysis;
- Multiple Simulation Replicas are Necessary to have a Direct Comparison to Experiments (Wide Sampling Approach);
- In Biology, Force Resilience Depends on Force Application Geometry;
- Bonds Forming Contacts in Biomolecules can be Activated to Become as Strong as a Covalent Bond;
- Bacteria Adhesion Evolved so that their Mechanostability only Depends on Backbone: Backbone Interactions;
- Hybrid QM/MM simulations are now available in NAMD and QwikMD;
- Network Analysis can be used to calculate force propagation pathways and/or allosteric communications.
